HERBS vs. CATARACTS

CN102091192A

Chinese medicine composition for treating cataract

Abstract

The invention provides a Chinese medicine composition for treating cataract, belonging to the field of Chinese medicines. The Chinese medicine composition for treating cataract is characterized by comprising the Chinese medicinal herbs in parts by weight: **20 parts of mother chrysanthemum, 15 parts of semen oroxyli, 8 parts of Chinese thoroughwort root, 15 parts of spica prunellae, 15 parts of folium isatidis, 8 parts of indigo naturalis, 10 parts of rhizoma alismatis, 10 parts of dangshen, 8 parts of cacusmen biotae, 10 parts of rhizoma typhonii, 12 parts of rhizoma atractylodis, 15 parts of eclipta, 12 parts of oldenlandia diffusa, 20 parts of concha haliotidis and 10 parts of periostracum cicada.** The Chinese medicine composition is prepared from the natural Chinese medicinal herbs as raw materials, is used for treating the cataract by using combined action of all Chinese medicinal herbs, has no toxic and side effects to a human body, and has the advantages of low cost and accurate treatment effect. The total effective rate of treating the cataract by using the Chinese medicine composition is 98.0 percent.

CN105031024A

Herb composition for treating senile cataract

Abstract

The invention discloses a herb composition for treating the senile cataract. The herb composition comprises the raw material herbs of **lancea tibetica, fructus semecarpi, lepisorus clathratus, berberis fruits, cucurbitacins and liensinine** in a proportioned mode. The herb composition can be prepared into various preparation types according to a common preparation technology, and has a remarkable treatment effect on the senile cataract.

A017337B1

A SYNERGISTIC HERBAL COMPOSITION AGAINST CATARACT COMPRISING EXTRACT OF HERBS SELECTED FROM *Foeniculum vulgare*, *Murraya koenigii* AND *Triphala*

Abstract

A present invention relates to the synergistic herbal ophthalmic composition, which delays the onset and progression of cataract. The composition comprises comprising extract of herbs

selected from **Foeniculum vulgare (0.1 to 2.0 of wt %)**, **Murraya koenigii (0.1 to 2.0 of wt %)**, and **Triphala (0.1 to 5.0 of wt %)**. The composition is suitable for prophylactic treatment of cataract of different degree. The herbs are cleaned coarsely ground, weighed as per formula and extracted using different solvents preferably water, filtered or centrifuged to collect the clear filtrate and formulated in the form of sterile ophthalmic drops, gel, ointment, cream etc. for said therapeutic purpose.

CN101757070A

Traditional Chinese medicine powder for treating cataract

Abstract

The invention discloses medicine for treating senile cataract and a preparation method thereof. The medicine is prepared from **radix rehmanniae, mulberry leaves, cicada slough, rhizoma anemarrhenae, tree peony bark, flos chrysanthemi, buerger pipewort flowers, semen sesami nigrum, poria cum radix pini, concha haliotidis, dendrobium nobile, radix codonopsis pilosulas, rhizoma atractylodis, poria cocos, radix liquiritiae, radix angelicae sinensis, radix ophiopogonis, dried longan pulp, semen cuscuteae, barbary wolfberry fruits, rubus idaeus, Chinese magnoliavine fruits and plantain herbs** according to a certain weight ratio. The medicine has the functions of dispelling the wind, clearing heat, cooling blood, improving eyesight, removing the toxicity, calming the liver, suppressing yang, moistening the lung and tonifying the liver, the medicine takes effect quickly and is good in treatment effect when being used for treating senile cataract, and senile cataract does not relapse.

CN1097615A

Nephelium clearing eye drops

Abstract

The eyedrops is composed of yellow lead, **Chinese angelica, chrysanthemum, borneol** and other traditional Chinese medicinal herbs. It is pure traditional Chinese medicine, without toxic side effect, golden colour, it has significant curative effect for leukoma and cataract, and notable curative effect for pinkeye, keratitis and lacrimation induced by wind.

CN105232863A

Medicine for treating cataract

Abstract

The invention discloses medicine for treating the cataract. The medicine is mainly prepared from, by weight, **8-12 parts of atractylodes macrocephalae, 12-18 parts of paenoniae alba, 8-12 parts of angelica sinensis, 4-8 parts of radix bupleuri, 10-15 parts of feather cockscomb seeds, 8-12 parts of motherwort fruits, 8-12 parts of fructus lycii, 8-12 parts of semen plantaginis, 12-18 parts of concha haliotidis, 12-18 parts of semen cassiae, 8-12 parts of cyperus rotundus, 12-18 parts of prunella vulgaris, 12-18 parts of radix rehmanniae and 2-4 parts of liquorice**. According to the medicine for treating the cataract, the fourteen natural Chinese herbs are selected for scientific compatibility, the formula is simple, all the raw material herbs act synergistically to achieve the effects of soothing the liver, regulating the spleen, clearing away the heart fire and tonifying the kidney, and the

medicine takes effect fast, treats both manifestation and the root cause of the disease and is free of toxic and side effects. A preparing method is simple, the medicine is convenient to take and low in cost, and the effective rate reaches 94% or more.

CN102058749A

Chinese medicinal composition for treating cataract

Abstract

The invention relates to a medicament for treating cataract, in particular to a Chinese medicinal composition for treating cataract by using plant herbs as raw materials. The composition is characterized by comprising the following Chinese medicinal herbs by weight: **15 to 25g of feather cockscomb seed, 10 to 20g of shell of abalone, 10 to 20g of cassia seed, 10 to 20g of selfheal spike, 10 to 20g of raw rehmannia, 10 to 20g of paenoniae alba, 5 to 15g of astragalus mongholicus, 5 to 15g of chrysanthemum, 5 to 15g of motherwort fruit, 5 to 15g of medlar, 5 to 15g of nutgrass galingale rhizome and 2 to 5g of liquorice root.** The Chinese medicinal composition has compatibility of medicaments, has the effects of clearing liver and improving vision, tonifying kidney and strengthening sperm, reinforcing the spleen to replenish vital energy, tonifying lung and strengthening exterior, enriching blood and invigorating the circulation of blood, clearing away heat and detoxicating, regulate the flow of vital energy and dispelling melancholy and the like, ensures synergism of drug effect, can be used for treating both principal and secondary aspects of diseases without side effect, and has remarkable curative effects on the cataract caused by aging and weak body, liver-kidney deficiency, asthenia of essence and blood, vision tonifying unavailability, spleen deficiency, the fact that vital energy of internal organs cannot be concentrated on the eyes, liver disharmony, syndrome of heat stagnated in liver meridian and vision confusion.

Traditional Chinese medicine combination for treating cataract

Abstract

The invention relates to medicine for treating cataract, in particular to a traditional Chinese medicine combination prepared by using Chinese medicinal herbs as raw materials and used for treating cataract. The traditional Chinese medicine combination is characterized by being prepared from, by weight, **13-19 g of Radix rehmanniae preparata, 10-25 g of Radix polygoni multiflori preparata, 30-40 g of Tribulus terrestris, 13-19 g of Radix paeoniae rubra, 13-19 g of Polygala tenuifolia, 5-10 g of bat dung, 5-10 g of Concha haliotidis, 13-19 g of peach kernel, 2-9 g of Flos carthami, 10-20 g of Rhizoma acori graminei, 30-40 g of selfheal, 30-40 g of Semen astragali complanati, 15-25 g of Flos eriocauli, 10-25 g of live magnet, 5-15 g of Radix bupleuri, 2-9 g of cicada shell, and 2-9 g of Radix glycyrrhizae.** All components of the traditional Chinese medicine combination are natural traditional Chinese medicine raw materials, so that the traditional Chinese medicine combination is simple to prepare, wide in medicinal herb source and low in cost. The Chinese medicinal herbs have synergistic effect, so that the traditional Chinese medicine combination has remarkable treatment effect on cataract caused by feebleness with age, liver-kidney deficiency, essence-blood deficiency, incapability of nourishing eye orifices, dysfunction in transportation due to spleen deficiency, incapability of improving eyesight by vital essence of viscera, liver qi disorder, heat stagnation in liver meridians and disturbing of eye orifices.

CN101152493A
Chinese medicine for treating cataract

Abstract

A Chinese traditional medicine for curing cataract belongs to a Chinese traditional medicine for curing cataract. The ingredients of the medicine are **25g of root kudzu vine, 12g of winter wheat, 6g of orange fruit, 3g of liquorice, 12g of virgate wormwood herb, 9g of loquat leaves, 10g dendrobium, 6g of scutellaria roots, 12g of coix seeds and 10g of fresh tube of multiflower knotweed**. The medicines used in the prescription are all natural herbs and the Chinese traditional medicine is processed with traditional method; the fetching of material is convenient and the prescription and manufacture method are simple; the expense for manufacturing the medicine is low. The composition of the Chinese herbal medicine is simple and the medicines used in the prescription are all natural ones and the fetching and use are convenient; the manufacture method is simple and the effect is excellent; the price is low; in this way, the herbal medicine is especially fit for people living in remote villages far away from counties and towns; the curing expense for patients with the disease of cataract is low which solves the problem that the household income is low and the life is poor and the medical conditions is deficient locally.

CN101152401A
Traditional Chinese medicine for treating asthenia of liver and spleen type senile cataract

Abstract

A Chinese traditional medicine for curing cataract of old aged people with weak liver and spleen belongs to the Chinese traditional medicine for curing cataract. The ingredients of the medicine (with weights) are **rehmannia root 24g and prepared rehmannia root 24g, white peony 12g, Tuckahoe 12g, sepium 12g, medlar 10g, chrysanthemum 10g, ledeboruiella root 10g, Chinese arborvitae kernel 10g, asarum 2g, bupleur 6g, liquorice 6g and yam 15g**. The medicines used in the prescription are all natural herbs and the Chinese traditional medicine is processed with traditional method; the fetching of material is convenient and the prescription and manufacture method are simple; the expense for manufacturing the medicine is low. The composition of the Chinese herbal medicine is simple and the medicines used in the prescription are all natural ones and the fetching and use are convenient; the manufacture method is simple and the effect is excellent; the price is low; in this way, the herbal medicine is especially fit for people living in remote villages far away from counties and towns; the curing expense for patients with the disease of cataract of old aged people with weak liver and spleen is low which solves the problem that the household income is low and the life is poor and the medical conditions is deficient locally.

CN105687440A
Traditional Chinese medicine eye plaster for treating cataract and shortsightedness

Abstract

A traditional Chinese medicine eye plaster for treating cataract and shortsightedness is prepared from, by weight, **22-26 parts of wild chrysanthemum flowers, 32-38 parts of honeysuckle flowers, 22-28 parts of borneol, 21-25 parts of radix saposhnikoviae, 21-25**

parts of herb of capsella bursa-pastoris (L.) Medic., 38-46 parts of radix angelicae pubescentis, 44-52 parts of concha haliotidis, 26-32 parts of tangerine white endocarp, 22-26 parts of fructus gardeniae, 38-48 parts of herba centipediae, 36-40 parts of watermelon peels, 13-19 parts of loquat fruit, 40-44 parts of luffa stems, 16-22 parts of spica prunellae, 16-22 parts of sweet wormwood herb, 24-32 parts of chestnut shells, 34-42 parts of herb of saxifraga stolonifera (L.) Meerb., 26-30 parts of white lotus seeds, 26-30 parts of herb of chrysanthemum-like groundsel, 18-22 parts of arillus longan and 18-22 parts of flos rosae rugosae. The eye plaster is prepared by adopting the pure Chinese herbs, fully integrates the properties of the Chinese herbs and is free of toxic and side effects, the effects of dissipating blood stasis, dredging the veins, activating blood circulation, relaxing the muscles and tendons, moistening dryness, clearing heat, freeing orifices and improving the eyesight are achieved by pasting the eye plaster to the eye skin to be quickly absorbed, the higher effect on treating the cataract and the shortsightedness is achieved, especially, the treatment effect on the shortsightedness of adolescents is more obvious, and the shortsightedness is not prone to relapse after being cured; the certain effect of preventing the shortsightedness is also achieved if the eye plaster is often used.

CN106166234A

Traditional Chinese medicine combination for treating cataract

Abstract

The invention relates to a traditional Chinese medicine combination for treating cataract. The traditional Chinese medicine combination is prepared from raw traditional Chinese medicines including in parts by weight, 10-30 parts of semen cuscutae, 5-25 parts of purslane, 5-20 parts of pipewort, 5-25 parts of cassia seeds, 5-25 parts of hedyotis diffusa, 5-25 parts of herba violae, 5-20 parts of bat's dung, 5-25 parts of rose, 5-25 parts of stringy stonecrop, 5-25 parts of oroxylum indicum, 5-20 parts of commelina diffusa, 5-25 parts of tribulus terrestris, 5-25 parts of rough gentian, 5-25 parts of variegated lady's slipper herbs, 5-20 parts of gynostemma pentaphylla, 5-25 parts of shepherd's purse, 5-25 parts of dendrobium, 5-25 parts of verbena, 5-20 parts of kelp, 5-25 parts of sealwort, 5-25 parts of butterflybush flowers, 5-25 parts of mulberries, 5-25 parts of albizia flowers and 5-15 parts of liquorice. The traditional Chinese medicine combination has the functions of tonifying liver, nourishing kidney, invigorating spleen, replenishing qi, promoting qi circulation, relieving depression, treating opacity of the cornea, clearing heat, removing toxicity, tonifying blood and nourishing yin, cataract treatment effects are remarkable, and the functions are reliable.

CN105963371A

Eye medicine for treating ophthalmic diseases and preparing method thereof

Abstract

The invention discloses an eye medicine for treating ophthalmic diseases. The eye medicine is prepared from, by weight, 20-40 parts of cassia seeds, 20-40 parts of concha haliotidis, 10-30 parts of chrysanthemums, 5-25 parts of mint, 10-30 parts of lonicera japonica, 10-30 parts of tribulus terrestris, 5-25 parts of selfheal, 10-30 parts of rhizoma atractylodis, 5-25 parts of herba leonuri, 5-25 parts of plantain herbs and 3-20 parts of licorice roots. The eye medicine for treating ophthalmic diseases and a preparing method thereof can be used for treating eye diseases such as presbyopia, cataract and myopic eyes, the washing

mode is adopted to conduct treating, the effect is mild, adverse reactions are small, the eye medicine can be applied for a long time, use is convenient, the curative effect is quick, rebound is not prone to occur, and using, carrying and custody are quite convenient.

CN102772707A

Chinese herbal preparation for treating eye diseases

Abstract

The invention relates to a Chinese herbal preparation for treating eye diseases. The Chinese herbal preparation is composed of **rhizoma atractylodis, glabrous greenbrier rhizome, rhizoma bolbostemmae, lawn pennywort herbs, bat dung, cortex phellodendri, gentian, polygonatum odoratum, mulberry leaves and borneol**. The Chinese herbal preparation method includes placing the components into a meat lucid ganoderma mother liquid for soaking, fishing out the components from the meat lucid ganoderma mother liquid and drying, frying the components to be charcoals, and porphyρίζing the fried components to be powders. The Chinese herbal preparation for treating eye diseases is powder, the Chinese herbal preparation is externally used and directly added for three times each day. The Chinese herbal preparation has the advantages that various symptoms of cataract, myopia, presbyopia and the like can be rapidly eliminated, the cure rate is high, the preparation has anti-inflammation and analgesia effects, both manifestation and root causes of diseases can be treated, and simultaneously pains of patients can be remarkably relieved.

CN104887974A

Traditional Chinese medicine formula for treatment of cataract eye disease and making method for preparation thereof

Abstract

The invention discloses a traditional Chinese medicine formula for treatment of cataract eye disease and a making method for a preparation thereof. The formula involves the following Chinese medical herbs by weight part: **100-300 of saussurea involucrate, 100-300 of Coreopsis tinctoria flowers, 100-400 of cassia seed, 100-400 of Chinese wolfberry, 200-400 of Cuscuta chinensis, 100-400 of purslane, 200-400 of dendrobium nobile, 200-400 of raw bighead atractylodes rhizome, 100-300 of semen celosiae, 100-300 of plantain seed, 100-400 of licorice, and 100-300 of pearls**. The making method includes: removing impurities from the Chinese herb raw materials and conducting mixing, then conducting extraction with a 55%-95% ethanol aqueous solution, performing concentration into a paste, and carrying out drying and crushing into fine paste powder, then crushing the pearls into superfine micropowder, mixing the fine paste powder and the superfine micropowder to obtain mixed fine powder, and adding medically common auxiliary materials to prepare paste, patches, tablets, granules or capsules, which have the advantages of good curative effect, convenient use, and easy carrying.

CN112168897A

Chinese patent medicine eye medicine

Abstract

The invention discloses a formula of a Chinese patent medicine eye medicine, relates to the

fields of traditional Chinese medicine preparations and preparation methods therefor and particularly relates to eye medicines prepared from traditional Chinese medicines. The formula is characterized by comprising 25-30 parts of bat's feces, 30-35 parts of animal livers, **3-5 parts of auricularia auricula**, **10-15 parts of moon fallout**, **3-5 parts of lycium barbarum** and **8-10 parts of herbs of Chinese dicliptera**. The above-mentioned raw materials are weighed according to a certain weight ratio. The raw materials are derived from natural objects, and substances harmful to human bodies such as preservatives, antibiotics and hormones are not added absolutely; and the raw materials are medicine-food homologous and are a brand-new traditional Chinese medicine combination absent in the past, so that the eye medicine is a good medicine for treating and preventing eye diseases, is applicable to conjunctivitis, pinkeye, trachoma, eyestrain, cataract and the like and is remarkable in treatment effect, difficult in recurrence and convenient and comfortable in use.

CN105796869A

Pharmaceutical composition capable of treating and/or assisting in treating eye diseases and preparation method thereof

Abstract

The invention provides a pharmaceutical composition capable of treating and/or assisting in treating eye diseases and a preparation method thereof. The pharmaceutical composition is prepared from the following raw herbs in parts by weight: **24 to 36 parts of concha haliotidis**, **24 to 36 parts of semen cassiae**, **14 to 22 parts of semen celosiae**, **9 to 15 parts of fried fructus gardeniae**, **9 to 15 parts of scutellaria baicalensis**, **9 to 15 parts of radix saposhnikoviae**, **12 to 18 parts of herba equiseti hiemalis**, **12 to 18 parts of flos buddlejae**, **9 to 15 parts of radix ophiopogonis** and **9 to 15 parts of fineleaf schizonepeta herb**. The invention also provides a preparation method and application of the composition. The composition provided by the invention is reasonable in prescription, can be used for treating multiple types of eye diseases, has the efficacy of clearing liver and improving vision and removing nebula, can be used for treating keratitis, especially herpes simplex keratitis, acute and chronic iridocyclitis, nebula, macula and early cataract, and is obvious in curative effect and good in safety, thereby being a new medicine selection for the clinic.

CN102106977A

Externally-applied sturdy vision eyeshield liquid medicine for preventing and treating oculopathy

Abstract

The invention discloses a traditional Chinese medicine-based medicinal liquor, wherein a traditional Chinese medicine composition comprises the following components in percentage by weight: **35-45% of barbary wolfberry fruit**, **35-45% of chili**, **1-3% of pseudo-ginseng**, **1-3% of safflower**, **1-10% of ganoderma lucidum**, **1-10% of semen cassia** and **1-10% of chrysanthemum**. The traditional Chinese medicine-based medicinal liquor has an excellent curative effect in treating dermatophytosis because the Chinese herbs such as barbary wolfberry fruit, chili, pseudo-ginseng, safflower, ganoderma lucidum, semen cassia and chrysanthemum are combined with one another. The traditional Chinese medicine-based medicinal liquor further has the effects of treating ozostomia, dental ulcer and rhinitis, tightening skin, resisting wrinkles, removing blace, whitening spots, and the like. The traditional Chinese medicine-based medicinal liquor also has a remarkable curative effect in

treating early-stage cataract and glaucoma. Besides, the traditional Chinese medicine-based medicinal liquor further can be used for expelling parasite and sterilizing. The preparation method of the traditional Chinese medicine composition is simple, convenient to operate and advantageous.
