COMBINED PHARMACEUTICAL COMPOSITION AND METHOD FOR TREATING AND PREVENTING INFECTIOUS DISEASE JP2018135370

PROBLEM TO BE SOLVED: To provide a pharmaceutical composition in treating and preventing infectious diseases including bacterial infection due to various infectious factors of pseudo tuberculosis, pertussis, yersiniosis, pneumonia and the like due to various causes of disease, and acute respiratory tract infection, various types of influenza, acute viral hepatitis type A, type B, type C and other hepatitis, and acute and chronic viral infection such as disease and state related to HIV, and a method for using the composition. **SOLUTION:** A pharmaceutical composition contains: a) a mixture of homeopathy diluted product of C12, C30 and C200 of an antibody against at least one cytokine, and/or mixture of homeopathy diluted product of C12, C30 and C50 of an antibody against at least one cytokine; and b) a mixture of homeopathy diluted product of C12, C30 and C200 of an antibody against at least one receptor, and/or mixture of homeopathy diluted product of C12, C30 and C50 of an antibody against at least one receptor

A COMPOSITION FOR DYNAMIC AGRO-HOMEOPATHY DILUTIONS, MADE OF PLANT PESTS AND NURSES FOR THE PROTECTION OF THE CULTURE AND OBTAINING METHOD THEREOF. MX2018003634

The present invention relates to a composition of dynamic agro-homeopathic dilutions prepared from pests and diseases of maize for the protection thereof, in a holistic manner. Said composition characterizes by consisting of at least one mixture of dynamic agro-homeopathic dilutions centesimal scale made from mother tinctures obtained from parts of insect plague finely chopped or mashed corn pests selected from the group consisting of red spider (*Tetranychus* spp.), aphid (*Rhopalosiphum* *Maidis*), thrips (*Frankliniella* spp.), blind hen (*Phyllophaga* spp.), armyworm (*Spodoptera* *Frugiperda*), puffin (*Macrodactylus* *Mexicanus*), grasshopper (*Sphenarium* spp.), corn earworm (*Helicoverpa* *Zea*), maize weevil (*Sitophilus* *Zeamais* M), flour chestnut Weevil (*Tribolium* *Castaneum* H). Furthermore, it involves crushed parts of plants affected by diseases of at least one mixture of corn diseases selected from the group consisting of root rot (*Fusarium* spp.), rust (*Puccinia* *Sorghii*), tar spot (*Phyllachora* *Maydis*), damping off (*Botrytis* *cinerea*, *Alternaria*, *Phytophthora*, *Fusarium* spp) and spike charcoal (*Sphacelotheca* *Reiliana*).

Method for duplicating material information into water CN107867742

The invention provides a method for duplicating material information into water. The method comprises steps as follows: a solution of a purified to-be-duplicated substance is prepared; the solution of the to-be-duplicated substance is put in a container A, the container A is

closed, another container B is taken, ultrapure water is added to the container B, and the container B is closed; the container A and the container B in the last step are put in the same electromagnetic field, outer walls of the container A and the container B are contacted directly, and the container A and the container B are put for 8 h or longer; whether the ultrapure water in the container B has the information characteristics of the chemical substance in the container A is verified. According to the provided method, the distance between the to-be-duplicated chemical substance and water is shortened, and information of the chemical substance in one container is duplicated to water in the other container under the action of the electromagnetic field; the test conditions are mild, operation is simple, the duplication process is easy to implement, and an effective means is provided for preparation of homeopathy drugs, water information research and basic research of biomolecule interaction.

AGENT FOR USE IN HOMEOPATHIC TECHNOLOGY RU2678979

SUBSTANCE: group of inventions relates to homeopathy. Proposed tool for use in homeopathic technology, which is a neutral carrier, processed by passing an electric current under the action of a potential difference, applied to electrodes placed on the source neutral carrier, which is proportional to the amplitude of the difference in bioelectric potentials taken from different points of the brain. Method for producing the specified agent and device for production thereof is also proposed. **EFFECT:** group of inventions provides a neutral carrier for homeopathic technology.

Production method of solid-state water particle CN107381505

The invention discloses a production method of a solid-state water particle used for a homeopathy. The production method comprises the following steps: S1, continuously diluting any organic-inorganic solution into purified water in an inert gas environment; S2, applying an electrical field to the any organic-inorganic solution and the purified water to form solid-state water particle solution, wherein the solid-state water particle solution comprises a large crumb of solid-state water particles; S3, performing ultrasonic vibration on the solid-state water particle solution in water bath; destroying the large crumb of solid-state water particles, so that the large crumb is broken into small clusters of solid-state water particles; S4, enabling the small clusters to stand in a non-active stage with preset time, so that the small clusters can produce larger crumbs of solid-state water particles; and S5, repeating the step of ultrasonic vibration in S3 and the step of enabling to the small clusters to stand in S4 until solid-state water particles with preset concentration are formed in the solid-state water particle solution. According to the production method, more effective ingredient solution can be provided.

FACTORIAL HOMOEOPATHIC PROCESS WO2017195215

The present invention provides a factorial homeopathy process of trituration/succussion for transferring energy to a raw material without using any bland material. The process transfers energy so that molecules of the raw material achieve higher levels of activation and become easy to absorb by the living organisms.

DISCUSSION

[004] Hahnemann conceived the concept of succussion in Homoeopathy. The raw material is diluted in water, alcohol, mixture of both or in lactose (known as vehicle). The shaking of raw material is performed with definite proportions of select vehicle for a predefined number of times or minutes to achieve higher potency. [005] In Homeopathy, Potentisation is a well known process of making a raw material more potent by triturating and succussion. The raw material is usually diluted with a bland material (also known as vehicle) such as alcohol or distilled water, and then followed by shaking in a specific method according to Pharmacopoeia. Alcohol is usually preferred; except in cases where the raw material is only soluble in water. The process is generally followed to transfer energy to raw material for achieving high levels of activation that are easy to absorb by living organisms.

[006] Potentisation results in reduction of raw material to a state of approximately perfect solution. In other words, potentisation is a process to reduce a material to the finest possible state, and thereby transferring energy to the chemically bonded electrons in the raw materials molecules to achieve higher states of stable existence.

[007] Trituration means grinding of raw material in a pestle, mortar, and any other machinery that can be used for the same purpose. One such apparatus, disclosed in the US patent 4061276, reduces particle size of raw material by the process of collision of material in a rotating bowl.

[008] The process of succussion or trituration is very widely used in the homeopathy for achieving the high potency of the mother tincture. Since energy is transferred to raw material during the process, the raw material becomes more effective. However, the process does not provide factorial potency of the drug. [009] Moreover, edible materials, manufactured using homoeopathy process, are not available in the market that can be used for living organism having weak digestive system.

DESCRIPTION

[010] While reading this section (An Exemplary Embodiment, which describes the exemplary embodiment of the best mode of the invention, hereinafter referred to as "exemplary embodiment"), one should consider the exemplary embodiment as the best mode for practicing the invention during filing of the patent in accordance with the inventor's belief. As person with ordinary skills in the art may recognize substantially equivalent structures or substantially equivalent acts to achieve the same results in the same manner, or in a dissimilar manner, the exemplary embodiment should not be interpreted as limiting the invention to one embodiment.

[011] The discussion of a species (or a specific item) invokes the genus (the class of items) to which the species belongs as well as related species in this genus. Similarly, the recitation of a genus invokes the species known in the art. Furthermore, as technology develops, numerous additional alternatives to achieve an aspect of the invention may arise. Such advances are incorporated within their respective genus and should be recognized as being functionally equivalent or structurally equivalent to the aspect shown or described. A function or an act should be interpreted as incorporating all modes of performing the function or act, unless otherwise explicitly stated. For instance, Triturate means to rub, crush, grind, or pound into fine particles or a powder; pulverize. Therefore, the use of the word "trituration" invokes

"rub" or "crush" and all other modes of this word and similar words such as "grind".

[012] Unless explicitly stated otherwise, conjunctive words (such as "or", "and", "including" or "comprising") should be interpreted in the inclusive, and not the exclusive sense.

[013] The foregoing discussions and definitions are provided for clarification purposes and are not limiting. Words and phrases are to be accorded their ordinary, plain meaning, unless indicated otherwise.

EMBODIMENT DISCUSSION

[014] In the process, the raw material is added repeatedly instead of bland material or vehicle during the trituration/succussion process and a product with all level of potency (Q, 1X, 2X, 3X, 4X, 5X, 6X) can be manufactured when the process is repeated six times for transfer of energy. The process is valid for all type of notations like decimal/centesimal etc.

[015] In one embodiment, raw material is taken without any dilution and triturated. The process of manufacturing product would be - a) add two parts by weight of raw material are taken; b) triturate thoroughly for a predefined time; c) stir continuously for a predefined time; d) follow steps b) and c) in same sequence; e) add four parts of raw material; f) follow steps b), c) and d); g) add four part of raw material; h) follow steps b), c) and d). The raw material can be selected based on the product to be manufactured.

[016] In another embodiment, the process is further repeated while adding the same raw material to achieve higher factorial potency. The final product will contain all the power from q to highest potency.

[017] The pure 6X of the product (continuous trituration without adding any further material) can be subjected to laboratory tests like coulombs meter, spectroscopy or nuclear magnetic resonance to verify the results.

[018] In an alternative embodiment, the method can be applied to liquid, solid and/or semi-solids.

[019] The objective of trituration process is to reduce material size to the finest possible stable state and thereby transferring energy to chemically bonded electrons of molecule of the raw material for achieving higher states of stability. The valence electron of molecules of the raw material would absorb energy primarily. The energy is then transferred to living organism when consumed, i.e. the molecules emit the previously absorbed energy (like fraunhofer lines in spectroscopy) with the resultant emitted quanta/packet (bunch of frequencies) being typical of the particular remedy.

[020] Although any suitable equipment can be used for trituration; the resultant product shall not be exposed to contact with metal to retain energy in the product intact. Therefore, equipment shall be designed in such a way that it does not allow any such contact.

[021] In accordance with embodiments of the present invention, the process starts with trituration and stirring of 100 grams of calcium carbonate. Trituration and stirring is continued till potentisation of IX is achieved. After an hour of potentisation, 8.3 grams of twelve biochemic salts are added to 100 grams of IX calcium carbonate is added and process

of trituration is continued till 3X factorial potentisation is achieved. Thereafter, a mixture of supari, yaks milk and cheese granules soaked in ocirnum sanctum and syzgayzium aromaticum is added to the processed calcium carbonate in the ratio of 15-20% by weight.

[022] In accordance with embodiments of the present invention, fish meal and calcium carbonate are added in equal proportion and triturated till factorial homeopathy potentisation of 3X is achieved. Other feed materials like maize can be added followed by trituration of at least 6 hours to produce highly digestible food stuff.

[023] The process described in the present invention is not restricted to abovementioned examples. It can be used to manufacture all edible stuff, pharmaceuticals, veterinary and aqua culture feeds and chemicals, fertilizers, fragrances, pesticides, detergents, mouth fresheners, or any stuff that living organisms consume. By using the process, any stuff can be made more effective as it would possess better absorption and digestive properties.

Cup realizing homeopathic oscillating effect

CN106308320

The invention discloses a cup realizing a homeopathic oscillating effect. The cup comprises a cup cover, a cup body and a base, wherein at least one oscillating assembly and a connector are arranged in the cup body, the oscillating assembly comprises an oscillating block and a limiting part, an upwards raised limiting body of the limiting part and a downwards sinking connecting body of the connector form a cavity for accommodating the oscillating block, the oscillating block can move in the cavity, and the oscillating block, the limiting body and the connecting body are provided with an oscillating through hole group, a limiting through hole group and a connecting through hole group, respectively. The cup provided by the invention is convenient to assemble and disassemble and good in waterproofing effect, due to the oscillating assembly and the connector mounted in the cup, the oscillating effect of the liquid in the cup can be obviously improved when the cup is shaken by hands, through the arrangement of the through hole groups in the oscillating block, the limiting body and the connecting body, the oscillating effect of the liquid in the cup can be further improved, the dissolving efficiency of to-be-dissolved matters such as ointment can be improved when the cup is shaken by hands, and the cup is suitable for preparing homeopathy medicines, and can be applied to the homeopathy.

Homeopathic traditional Chinese medicine composition for treating cold

CN105726897

The invention relates to a homeopathic traditional Chinese medicine composition for treating cold. The homeopathic traditional Chinese medicine composition, prepared by mixing a homeopathic preparation of herb of decumbent bugle, a homeopathic preparation of gelsemium elegans, a homeopathic preparation of echinacea, a homeopathic preparation of common cnidium fruit, a homeopathic preparation of atropa belladonna, a homeopathic preparation of nux vomica and a homeopathic preparation of bulb of common onion according to a proper proportion, can maintain proper low-frequency electromagnetic signals, not only has better curative effects on cold but also can reduce or completely remove toxicity of original traditional Chinese medicines and help solve the problem that the curative effects of single medicines used for treatment in existing homeopathy are not ideal. By adopting compound medicines, the homeopathic traditional Chinese medicine composition can gain

better curative effects when being used for treating cold.

METHOD FOR PRODUCTION OF SOLID WATER PARTICLES FOR HOMEOPATHY

US2015335740

A method for production of solid water particles for homeopathy uses principles of quantum physics to form a concentrated solid water particle solution. A homeopathic ingredient solution is diluted in purified water in an inert gas environment. The dilution occurs as infinitesimal doses, in which the solution is repetitively diluted in water past the point where few molecules from the solution remain. An electrical field is applied to align the water molecules for formation of a large clump of solid water particles. Alternating phases of ultrasonic vibrations break down the large clump into small clusters of solid water particles. The vibration is followed by periods of rest, whereby the small clusters grow into successively larger clumps by absorbing water molecules. The vibrations and resting are repeated in cycles until a desired concentration of solid water particles form in the solid water particle solution.

Manufacturing method of sublingual spray and troche for smoking cessation

KR101506708

The present invention relates to a method for manufacturing a sublingual spray and a troche for quitting smoking, and a sublingual spray and a troche manufactured by the same and, more specifically, to a method for manufacturing a sublingual spray and a troche for quitting smoking, which are free of toxic chemicals by being made of a natural material, and are simply manufactured by using homeopathy, and to a sublingual spray and a troche manufactured by the same.

THE METHOD OF MANUFACTURING PURIFIED WATER USING NUCLEAR MAGNETIC RESONANCE AND HOMEOPATHY

KR20140118641

The present invention relates to a method for producing purified water for a cosmetic product. The method comprises the steps of: raising the energy of water by installing two large capacity permanent magnets on the outside of a pipe to have N poles facing each other, wherein the pipe is connected between a cosmetic product purified water producing device and a batch in which cosmetic product ingredients are mixed and produced; and performing homeopathy, wherein an extremely small amount of natural ingredients such as ferric ferrous salts, plant extracts, or mineral extracts are physically stimulated and repeatedly diluted in the purified water in the batch in which the cosmetic raw ingredients are mixed and produced. The purified water is produced using nuclear magnetic resonance and homeopathy so as to replace premium water such as mineral water, bamboo sap, fermented water, aloe, famous mineral water, glacial milk, deep ocean water, or phreatic water which is used as a raw ingredient of purified water for a premium cosmetic product, so that production cost is reduced. A problem in which large molecules are not well-absorbed in the skin is solved, and the activation of skin cells is improved.

Electrostatic Activation of Vaporized Fluids

US2014010922

Methods previously shown to be effective in imparting a prolonged, non-temperature-related, increase in an intrinsic energy of fluids, including water and ethanol, have been applied to heat generated vapors of these fluids, leading to effective activation of the fluids upon their condensation. In a specific embodiment, a Van de Graaf generator was used to apply an electrostatic field to the vapors. The condensed fluids from these electrostatically activated vapors display enhanced internal mobility, more dynamic solubilization patterns using of sprinkled particles of neutral red dye and a progressive, but limited, reduction in measured weight. Fluids condensing from electrostatically-energized vapors can also impart intrinsic energy to other fluids by simple dilution. The described methods are relevant to an understanding of homeopathy.

DENTAL PROTECTION TOOTHPASTE COMPOSITION

US2012288454

The present invention relates to chemical industry for daily use field, specifically a dental protection toothpaste composition. Except toothpaste matrix components, the toothpaste composition including (the following components by weight of total composition): 0.48%-3.3% six tissue salts for homeopathy, 0.1%-9.8% Chinese herb medicine extractant, 0.08%-1.3% at least one of vitamin C vitamin E and coenzyme Q10. The toothpaste composition ingredient of the present invention connects the homeopathy medicine such as cell tissue salts, Chinese herb medicine and vitamin etc. active ingredients, which will help for solving tooth and oral health problems...

The homeopathy tissue salts are chosen from a six salts component including calcium fluoride, calcium phosphate, calcium sulfate, sodium phosphate, sodium chloride and silica, the combinative proportions of each of which is equal to each other according to their weight percentages. The six salts component as 1:3 weight percentages is dissolved into the solution whose weight percentage of water to ethanol is 4:1, to made for six salts component solution.

[0008] The Chinese herb medicine extractants includes 0.4%-4% propolis extracting solution, 0.2%-3.3% Chrysanthemum morifolium Ramat extracting solution, 0.05%-1.25% cranberry fruit extracting solution and 0.05%-1.25% liquorice extracting solution by weight of total composition.

[0009] The vitamin C in the present invention is chosen from calcium ascorbate powder and vitamin E is chosen from a-tocopheryl powder with wheat germ oil free...

Homeopathy-based formulation

WO2008139487

A formulation comprising a potentized mixture of triturated Lichen planus tissue with histamine in the ratio of about 1:2 to about 2:1 in a vehicle, where the ratio of the mixture to the vehicle, can be varied from 1:99 to 50:50.

HOMEOPATHIC PREPARATION "ENERGOSAN", INCREASING PHYSICAL ACTIVITY

RU2351342

SUBSTANCE: invention relates to homeopathy and can be used as medicinal-preventive remedy for increasing physical activity, workability and stamina for all pathological states,

accompanied by depression of bioenergetic processes. Homeopathic preparation, increasing physical activity, workability and stamina is characterised by representing 30 vol % solution of adenosindiphosphoric acid in homeopathic potency 30 CH. Preparation is taken in 20 drops of water-alcohol solution (30 vol %) dose one time a day half an hour before meal. ^
EFFECT: preparation stimulates natural regulatory mechanisms controlling bioenergetic processes without risk of doing harm by drug therapy.

Antihypertensive and spasmolytic homeopathic agent

MD3723

The invention refers to medicine, particularly to homeopathy. Summary of the invention consists in that the antihypertensive and spasmolytic homeopathic agent comprises Chelidonium majus, Arnica montana, Cactus grandifloris, Urtica dioica, Achillea millefolium, Calendula officinalis, Nitroglycerini, Cuprum metallicum tinctures, taken in equal proportions in centesimal dillution CH9. At the same time, the homeopathic agent can be prepared on a carrier in the form of sugar granules.

Homeopathic agent for treating inflammatory diseases of gastrointestinal tract

MD3722

The invention refers to medicine, particularly to homeopathy. Summary of the invention consists in that the homeopathic agent for treating inflammatory diseases of gastrointestinal tract comprises Chelidonium majus, Berberis vulgaris, Lycopodium clavatum, Iris versicolor, Urtica dioica, Calendula officinalis, Achillea millefolium tinctures, taken in equal proportions in centesimal dillution CH9. At the same time, the homeopathic agent can be prepared on a carrier in the form of sugar granules.

Homeopathic agent for locomotorium treatment

MD3721

The invention refers to medicine, particularly to homeopathy. Summary of the invention consists in that the homeopathic agent for locomotorium treatment comprises Arnica montana, Symphytum officinalis, Hypericum perforatum, Matricaria chamomilla, Apis mellifera tinctures, taken in centesimal dillution CH3 and glycerine in the following component ratio, mass %: Arnica montana 2.0...5.0 Symphytum officinalis 6.0...9.0 Hypericum perforatum 4.0...7.0 Matricaria chamomilla 12.0...15.0 Apis mellifera 7.0...9.0 Glycerine the rest.

METHOD FOR TREATING ALCOHOL ADDICTION

UA15379

The method for treating alcohol addiction provides for the basic therapy comprising suggestive psychotherapy and homeopathy. AlkoZAP1 homeopathic preparation used for this purpose comprises Selenium 6C, Nux vomica 6C, Carbo veget. 3C, Qvercus 3C. The preparation is taken sublingually, 5-7 grains, 30 minutes before the meals. The homeopathy is provided after the primary suggestive psychotherapy or in the setting of suggestive psychotherapy. In 25-28 days, 7-10-days interval follows. Then the course of the treatment is repeated until the elimination of alcohol addiction.

METHOD FOR TREATING PULMONARY TUBERCULOSIS PATIENTS RU2312673

SUBSTANCE: method involves administering antibacterial chemotherapy and treating biologically active points. The treatment is carried out by daily applying electric neurostimulation with 77 Hz frequency within 30-35 min. The total treatment course is 20 procedures long. The points of 4GI, 5TR, 6MC, 14VG and zones of posterior median line, right and left paravertebral lines and direct dorsal and direct anterior lung projection region are treated. Homeopathy preparations are additionally applied in combination comprising *Apis mellifica* 6, *China officinalis* 6, *Chelidonium majus* 6, *stannum* 6, *Sanguinaria coandensis* 6, *potassium bichromicum* 6, *Carbo vegetabilis* 6. The preparations are given at a dose of 5 granules three times a day irrespectibly of meals. ^ **EFFECT:** accelerated bacilli elimination and closing decay cavities.

HOMEOPATHIC AGENT "ANAVIARIN-HOMEOANTIGRIPPIN" POSSESSING ANTIVIRAL EFFECT RU2311194

FIELD: homeopathy, chemical-pharmaceutical industry, pharmacy. ^ **SUBSTANCE:** invention relates to creature of homeopathic agents possessing antiviral effect. Invention proposes two variants of agent. Homeopathic agent possessing antiviral effect comprises the following components: black elder (*Sambucus nigra*), speedwell officinalis (*Veronica*), shrubby dewberry (*Rubus fruticosus*), yellow jasmine (*Gelsemium sempervirens*), ferric (III) phosphate (*Ferrum phosphoricum*), common toadflax (*Linaria*), common whiteweed (*Chrysanthemum leucanthemum*), leaf-perforated thoroughwort (*Eupatorium perfoliatum*), planted everlasting pea (*Lathyrus sativus*) and pallid coneflower (*Echinacea pallida*) taken in the equal ratio and in dilution of each component 1D-30C. Agent possessing antiviral and antibacterial effect comprises monkshood (*Aconitum napellus*), deadly nightshade (*Atropa belladonna*), tinctorial baptisia (*Baptisia tictoria*), yellow jasmine (*Gelsemium sempervirens*), ferric (III) phosphate (*Ferrum phosphoricum*) white bryony (*Bryonia falba*), onion (*Allium cepa*), mercurius solubilis by Hahneman (*Mercurius solubilis Hahnemani*), perforated thoroughwort (*Eupatorium perfoliatum*), pallid coneflower *Echinacea pallida*) taken in the equal ratio and in dilution of each component 1D-30C. Proposed agents can be prepared as drops, granules and capsules. Agent provides the active effect on viruses and accelerates recovery processes in body. Invention can be used in treatment of patients with influenza, avian influenza, in prophylaxis and treatment of poultries damaged with virus H5N1 and in other acute respiratory-viral infections of different localization. ^ **EFFECT:** enhanced effectiveness and valuable medicinal properties of agent.

METHOD FOR TREATING HYPOTHALAMIC SYNDROME IN GIRLS AND WOMEN RU2306919

SUBSTANCE: one should introduce complex homeopathic preparations into acupuncture points - cerebrum-compositum, tonsilla-compositum and placenta-compositum. Moreover, injections of cerebrum-compositum should be carried out for points T14, PN45 (din-chuan'), VB21 (2), and injections of tonsilla-compositum - for points T14, VB21 (2), GI4 (2). Injections of each preparation should be carried out once-twice weekly during menstrual cycle. Injections of placenta-compositum should be carried out for points E36 (2), Rp6 (2) twice-thrice weekly during the second phase of menstrual cycle. Therapeutic course should be started on the 5th-7th d of menstrual cycle, each point should be injected with 0.2-0.5 ml

preparation. In case of anovulatory cycles and amenorrhea it is necessary to carry out additional injections of ovarium-compositum preparation during the first phase of menstrual cycle for points E36 (2), Rp6 (2) once-twice weekly. The innovation enables to correct hormonal disorders.

VAGINAL HOMEOPATHIC SUPPOSITORY "B ANTIKAN" (VARIANTS) RU2308963

SUBSTANCE: invention relates to creature of novel vaginal homeopathic suppository that can be used in treatment of female genitals. Invention proposes nine variants of homeopathic suppository containing sea-buckthorn oil, homeopathic oily extract, oils and homeopathic essences. Proposed suppositories possess the enhanced bioavailability based on addition of homeopathic oily extract in the prescription, improve regenerative function of organs and tissues and enhance effect of basic components that allows their using in homeopathy in treatment of fungal colpitis, vulvovaginitis, endometriosis and papillomas. ^ EFFECT: improved and valuable medicinal properties of suppository.

HOMEOPATHIC SUPPOSITORY "HEMOPROST-T" (VARIANTS) RU2308964

SUBSTANCE: invention relates to creature of novel homeopathic suppositories that can be used in treatment of prostatitis and hemorrhoid. Proposed homeopathic suppository contains propolis, sea-buckthorn oil, homeopathic oily extracts, oils and homeopathic essences. Proposed suppositories possess the enhanced bioavailability, improve regenerative function of organs and tissues that results to reducing period of the positive treatment. ^ EFFECT: improved and valuable medicinal properties of suppository.

VETERINARY HOMEOPATHIC AGENT "TRAVMATIN" ELICITING ANTI-INFLAMMATORY, ANALGESIC AND REGENERATING EFFECT RU2259207

SUBSTANCE: invention relates to homeopathic medicinal agents eliciting anti-inflammatory and regenerating effect. Invention proposes a homeopathic agent eliciting an anti-inflammatory, analgesic and regenerating effect and comprising Echinacea purpurea, Chamomilla, Calendula officinalis, Arnica montana, Belladonna atropa, Hypericum perforatum, Hepar sulfuris and ASD-2 taken in the definite ratio. The claimed agent inhibits the development of septic process and promotes to rapid regeneration of damaged tissues that allows its using for treatment of traumas of any genesis in post-surgery and post-traumatic edemas of soft tissues in inflammatory processes of different type and localization. Invention can be used in treatment of traumas of any genesis, in post-surgery and post-traumatic edemas of soft tissues, in inflammatory processes of different type and localization in animals. ^ EFFECT: valuable medicinal and veterinary properties of agent

HOMEOPATHIC SUPPOSITORY "IMMUNTIL" RU2288731

SUBSTANCE: invention relates, in particular, to suppository possessing immunomodulating effect and comprising coneflower, accessory substances and a base, sea-buckthorn oil, arborvitae (thuja) homeopathic essence, baptisia homeopathic essence, Timalin-1C homeopathic trituratum wherein coneflower is a component of homeopathic essence.

Suppository comprises anhydrous lanolin and wax as accessory substances and cacao butter as a base wherein components are taken in the definite ration in grams per one suppository of weight 2 g. Proposed suppository possesses the enhanced immunomodulating effect and allows stimulating processes of regeneration and hemogenesis and improves processes of cellular metabolism. ^ EFFECT: valuable medicinal properties of suppository.

METHOD FOR CORRECTING BODY STATE AT MULTIPLE SCLEROSIS

RU2258518

SUBSTANCE: the suggested method is based upon immunomodulating and restorative therapy and deals with introducing a homeopathic preparation as Renel at the dosage of 0.15 g/an intake sublingually to an empty stomach, twice daily for 10 d both in the morning and in the second half of the day. The method enables to restore excretory functions of pelvic organs in patients with multiple sclerosis due to manifestation of new properties of Renel preparation, that is restoration of regulating function of nervous system. ^ EFFECT: higher efficiency of correction.

"ZLATA" COSMETIC HOMEOPATHIC CURATIVE GEL FOR LOSING WEIGHT AND AGAINST CELLULITIS

RU2236862

SUBSTANCE: the suggested homeopathic gel contains butyric extract of wheat germs, that of Angelica, essential oils of orange and grapefruit, and, also, cornflower, lady's mantle, Fucus at C3, C6 and C12 dilution, Arnica at D3 dilution and graphite at C6 and C12 dilutions, vitamins A, E, d and supplementary substances taken at certain ratios. The suggested gel provides decreased fatty deposits at problematic skin sections. Patient's skin becomes smooth, elastic and flexible.

HOMEOPATHIC AGENT FOR TREATMENT OF RETINA DYSTROPHIC DISEASE

RU2240804

SUBSTANCE: invention relates to the development of agents used for treatment of diseases accompanying with retina dystrophy. The homeopathic agent used for treatment of retina dystrophic diseases comprises Ammonium carbonicum, Carbo vegetabilis, Calcareo carbonica, Acidum phosphoricum and Gelsemium taken in the equal ratios in dilution of components = C3:C3:C6:C6:C3, respectively. The agent is made as sugar granules. The agent exerts the complex effect on body, it has no contraindications and can be combined with intake of other medicinal agents and can be used in all age groups of patients. ^ EFFECT: valuable properties of agent

HOMEOPATHIC AGENT FOR RESORPTION AND PROPHYLAXIS OF HEMORRHAGE INTO RETINA IN OPHTHALMIC VASCULAR DISEASE

RU2242237

SUBSTANCE: invention relates to the development of homeopathic ophthalmic agents. Homeopathic agent used for resorption and prophylaxis of hemorrhages into retina in ophthalmic vascular diseases comprises Phosphorus, Arnica, Lachesis, Apis, Nux vomica and Carbo vegetabilis taken in equal ratios in the definite dilution of components. Agent is made as sugar granule. This agent exerts the complex effect on body and therefore it shows

universal effect without contraindications and allergic responses and can be combined with other medicinal preparations.

HOMEOPATHIC AGENT FOR REMOVING VISUAL FATIGUE

RU2240805

SUBSTANCE: invention relates to the development of homeopathic agents and can be used for removing visual fatigue after prolonged visual loading and in complex treatment of accommodative visual fatigue also. Invention proposes an agent for removing visual fatigue that comprises *Ruta graveolens*, *Drosera* and *Cuprum metallicum* taken in equal ratios in diluting C6. Homeopathic agent is made as sugar granules. Agent is used in all age groups of patients, among them, in children and can be combined with intake of other medicinal preparations.

HOMEOPATHIC AGENT FOR STABILIZATION OF OPTICAL FUNCTION IN GLAUCOMA

RU2236234

SUBSTANCE: invention relates to the development of homeopathic agents and can be used in conservative treatment of glaucoma with normal intraocular pressure and intraocular pressure normalized with medicinal preparations or by surgery method. Invention proposes a homeopathic agent for stabilization of optical functions in glaucoma with normalized intraocular pressure comprising *Gelsemium*, *Ammonium carbonicum*, *Carbo vegetabilis* taken in equal ratios in the following dilution of components: *Gelsemium*, C3; *Ammonium carbonicum*, C3; *Carbo vegetabilis*, C6. Except for, agent can comprise additionally *Aurum iodatum* in the dilution C6 and/or *Acidum phosphoricum* in the dilution C6, and this homeopathic agent is made as sugar granules. This agent is used in all age groups of patients, among them, in geriatric practice.

HOMEOPATHIC AGENT FOR CATARACT TREATMENT

RU2230561

SUBSTANCE: invention relates to the development of homeopathic agents used for cataract treatment. Invention proposes the homeopathic agent for treatment of cataract comprising *Conium*, *Secale cornutum*, *Cholesterin*, *Carbo vegetabilis* and *Ferrum jodatum* taken in the equal ratios in the definite dilution of components. Agent is prepared as sugar granules. The proposed agent can be used in all aging groups of patients, among them in geriatric practice. Except for, this agent can be coupled with other methods for treatment and preparations.

HOMEOPATHIC MEDICINAL AGENT "KHOLESAN" WITH CHOLAGOGIC EFFECT

RU2225217

SUBSTANCE: invention relates to the development of homeopathic cholagogic agent. Invention proposes the composition containing *Carduus marianus* C3, *Citrulus colocynthis* C6, *Lycopodium clavatum* C12, *Chelidonium majus* C6 taken in equal ratios. The composition represents the homeopathic medicinal agent made as sugar granules. The dose of this agent in patients results to disappearance severity and pain in right hypochondrium and epigastric region and eructation.

HOMEOPATHIC MEDICINAL AGENT "E-SAN" FOR ENURESIS TREATMENT RU2225216

SUBSTANCE: invention relates to the development of homeopathic medicinal agent for treatment of enuresis. Invention proposes the composition containing Belladonna, Equisetum hyemale, Pulsatilla, Causticum, Ferrum phosphoricum taken in equal ratios and in dilution C12. Composition represents homeopathic medicinal agent made as sugar granules. This agent is effective in disturbance of urination in children and adults.

METHOD FOR PREPARING ANTI-INFLUENZA AGENT RU2228191

SUBSTANCE: invention relates to the development of technology for preparing homeopathic medicinal agents based on vegetable base as tablets. Method involves preparing the following plant tinctures using 70% ethyl alcohol as an extractant: Jungarian monkshood roots, peppermint flowers and leaves, bryony roots, deadly nightshade flowers and leaves, common lady's mantle above ground part, mullein flowers and leaves, mezereon above ground part and coneflower above ground part. Raw is milled to particles size 2-5 mm. The ratio raw to extractant = 1: 10. Then honey bee bodies 10% tincture is prepared using 70% ethyl alcohol as an extractant. Then tincture is mixed in equal ratios and mercuric chloride in dilution 10-3 is added to the prepared mixture. Mixture is applied on granules representing a mixture of sugar powder with gelatin solution by spraying method in quasi- liquid system. Granules are dried at temperature 45-50 C, tableted with addition of calcium stearate and sublingual medicinal formulation with mass 0.25 g is obtained. Invention provides the high pharmacological effect.

MEDICINAL AGENT "POLYDERM" FOR TREATMENT OF PSORIASIS, ECZEMA AND PROPHYLAXIS OF THEIR RELAPSES RU2211045

SUBSTANCE: invention relates to the development of homeopathic agent used for treatment of cutaneous sicknesses. Invention proposes homeopathic agent for treatment of patients with psoriasis, eczema and for prophylaxis of their relapses containing in the equal ratios Dulcamara solanum, Lycopodium clavatum, Nux vomica and Rhus toxicodendron taken in dilutions C6- C24, C3-C12, C3-C12 and C6-C24, respectively. The balanced composition of components exhibits the expressed and stable curative effect leading to resorption of rashes and patches and disappearance of skin itching and so on.

COMPOSITION FOR MOUTH CAVITY CARE RU2208432

SUBSTANCE: composition for mouth cavity care comprising biologically active substances and special additives involves additionally homeopathic preparations taken in dilutions C6- C799 as preliminary prepared the potentiated, structurized solution taken in the definite quantitative ratio. The composition can be prepared as dental paste, gel, balsam, elixir, rinsing agent. The composition shows remineralizing, anti-inflammatory, trophic, adaptogenic and antioxidant effects.

HOMEOPATHIC DRUG FOR TREATMENT OF PATIENT WITH PROSTATE HYPERTROPHY

RU2144370

SUBSTANCE: invention relates to development of homeopathic drug that can be used for treatment of patients with prostate hypertrophy. Composition consists of *Serenoa serulata*, *Pulsatilla pratensis*, *Thuja occidentalis*, *Clematis recta*, *Vitex agnus castus* taken at equal ratios and at dilution C12, respectively. Composition is the homeopathic drug as sugar granules. Homeopathic drug improves the general state of patients, shows good tolerance, decreases difficulty in urination.

METHOD OF HOMEOPATHIC PREPARATION SELECTION**RU2144380**

SUBSTANCE: patient keeps glass filled with physiological solution in palm. Then solution sample is applied and distributed uniformly on slide, dried and crystallographic pattern is estimated under microscope. For distinction of crystalline picture from the normal one that fills light snow flakes with centered clear crystal and light concentric circles the central matured crystals show increased turbidity and concentric circles are more "heavy", mineralized. Patient keeps glass filled with physiological solution in one hand and homeopathic preparation to be tested in another hand. Then crystals are isolated from physiological solution by indicated method and the homeopathic preparation is considered to be useful for treatment of this patient if crystalline picture is normalized. Method is based on bioenergetic principle

METHOD OF HOMEOPATHIC SUPPOSITORY PREPARING**RU2169001**

SUBSTANCE: method involves the use of the following active substances: propolis, buckwheat flower honey with pollen, concentrate of Tambuktan curative mud and emulgator T-2 taken in the following ratio, weight p. p.: butyrum-cacao, 2.00; concentrate of Tambuktan mud, 0.50; native propolis, 0.05; buckwheat honey saturated with pollen, 0.10; emulgator T-2, 0.35. Dissolving and purification of components propolis, emulgator T-2 and butyrum-cacao are carried out by their separate melting. Propolis and emulgator T-2 are melted at 67-68 C and butyrum-cacao at 37-39 C followed by melts mixing to obtain eutectics at 41-42 C, not above. Dissolving of buckwheat flower honey saturated with pollen and concentrate of Tambuktan mud is carried out in native state at 41-42 C and the following cooling is carried out at 0-(-5) C in forms made of stainless steel at 0-(-5) C

**HOMEOPATHIC DRUG "NETIZZHOG" FOR DYSPEPTIC DISORDER
TREATMENT****RU2133123**

SUBSTANCE: invention relates to the complex homeopathic preparations and can be used as symptomatic agent for treatment of DYSPEPTIC disorders, in heartburn mainly. Homeopathic drug "Netizzhog" has *Capsicum*, *Acidum Sulfuricum* and *Nux vomica* taken at the equal ratio of components. The drug "Netizzhog" is made as granules saturated by homeopathic method with spirituous components at one to hundred dilution ratio: *Capsicum* - C30; *Acidum sulfuricum* - C50 and *Nux vomica* - C200. The agent shows broad range of therapeutic effect in dyspeptic disorders. EFFECT: enhanced effectiveness of drug.

HOMEOPATHIC DRUG SHOWING SEDATIVE EFFECT

RU2122858

SUBSTANCE: invention relates to complex homeopathic agents and can be used at periodical insomnia, overfatigue, overexcitation. Homeopathic drug has Belladonna, Nux vomica, Coffee at equal mass ratio of components. Drug is made as granules saturated with components at hundred alcoholic dilutions by homeopathic procedure. An agent shows the expressed therapeutic effect at low doses. EFFECT: enhanced effectiveness of drug.

**METHOD OF NORMALIZATION OF SUBSTANCE TOLERANCE OF ORGANISM
RU2134106**

FIELD: medicine; may be used in recovery of natural reactivity of organism to medicines and endogenous substances produced in organism or toxic substances. SUBSTANCE: method includes introduction into organism of potentiated preparation produced by multiple successive dilution and shaking or rubbing by homeopathy rules from the same substance to which initial physiological tolerance is to be normalized. EFFECT: reduction of introduced dose of active substance and higher efficiency of treatment.

**HYDRATING COMPOSITIONS FOR HUMAN AND ANIMAL BODIES
RU2153883**

SUBSTANCE: invention relates to hydrating composition involving the following components: (a) Hydrastis canadensis (trivial name is Canadian golden-seal); (b) Ulmus fulva (trivial name is slippery elm) and (c) Smilax ornata (trivial name is green briar). Composition can be prepared in homeopathic or nonhomeopathic form. Hydrating composition in homeopathic form can be prepared by any of the following procedures. 1. Preparing separate homeopathic preparations from components (a, b and c) and their mixing. 2. Mixing extracts of components (a, b and c) and formation of homeopathic composition from obtained mixture. 3. Preparing the first homeopathic composition as in points (1) and (2) followed by dilution of the first indicated composition by addition of the second homeopathic composition. EFFECT: enhanced hydration of body, enhanced absorption of oxygen at cellular level.

**HOMEOPATHIC COMPLEX PREPARATION "ALDIBOZ" FOR PROPHYLAXIS
OF ACUTE RESPIRATORY VIRAL INFECTIONS (PROPHYLACTIC
ANTIGRIPPIN)****RU2131732**

SUBSTANCE: agent has dibazol at dilution 6CH-7CH, Allium sativa at dilution 1CH-3CH, Alumina or Alumen at dilution 5CH-9CH and can be used for prophylaxis of acute respiratory viral infections. EFFECT: high therapeutic effectiveness of the preparation in clinics.

**HOMEOPATHIC DRUG "SPAZMINAL-ARN" SHOWING SPASMOLYTIC
ACTIVITY****RU2139719**

SUBSTANCE: agent has colocynthis, magnesium phosphoricum, arnica, cocculus and belladonna taken at the definite dilution. An agent improves elasticity of vessel walls, normalizes activity of vegetative nervous system and shows the stable therapeutic effect. An agent can be as a spasmolytic drug of the broad spectrum of effect.

HOMEOPATHIC DRUG "EREKTIN-ARN" FOR ERECTION STIMULATING RU2131738

SUBSTANCE: agent has damian (damiana), agnus cactus (agnus cactus), conium (conium), nufar luteum (nufar luteum) and potassium bichromate (kali bichromicum). Agent provides the effect on central nervous system, promotes apathism and apathy elimination, gives good results in treatment scheme of asthenic-neurotic and dissoimic syndromes. Agent can be used for stimulation of sexual hormonal function in males. EFFECT: enhanced effectiveness of an agent

METHOD FOR REDUCING TISSULAR INCOMPATIBILITY IN TRANSPLANTING ORGANS RU2130313

SUBSTANCE: method involves administering a medical preparation providing immune correction. The preparation is produced by potentiating a piece of tissue taken from the organ to be transplanted by means of multiple dilutions and shakings according to homeopathy method. The organ to be transplanted is additionally treated with the potentiated preparation that is also administered before and after transplantation. EFFECT: lowered tissue incompatibility.

SEDATIVE MEDICINAL AGENT RU2113232

SUBSTANCE: agent has Pulsatilla, Actaea racemosa and Magnesium phosphoricum taken at equal dilutions and neutral carrier. Proposed agent shows broad pharmacological effect, eliminates pains, irritability, weakness and other symptoms in women at menstrual period. EFFECT: enhanced effectiveness of an agent.

SEDATIVE MEDICINAL AGENT RU2113231

SUBSTANCE: agent has Crataegus, Ignatia, Arnica and neutral carrier. All components are taken at an equal dilution. Proposed agent shows broad spectrum of therapeutic effect at different impairments of cardiac-vascular system. EFFECT: enhanced effectiveness of agent.

SEDATIVE MEDICINAL AGENT RU2113230

SUBSTANCE: agent has Cocculus, Veratrum album and Borax taken at equal dilutions and neutral carrier. Proposed agent provides good curative effect for prophylaxis of marine disease and air-pilots. Agent shows sedative effect. EFFECT: enhanced effectiveness of an agent.

HOMEOPATHIC DRUG "KLIMAKSAN" RU2134118

SUBSTANCE: invention relates to combined homeopathic preparations of plant and natural origin. Drug "Klimaksan" has medicinal substances Cimicifugae-c200, Zechesis-c50, Apis mellifica-c200 and neutral carrier made as sugar granules. Drug can be used at different

pathological symptoms of climacteric period. EFFECT: enhanced effectiveness of drug.

SEDATIVE MEDICINAL AGENT

RU2113229

SUBSTANCE: agent has Ignatia amara, Actaea racemosa and Zincum valerianicum taken at equal dilutions and neutral carrier. Agent shows sedative effect. EFFECT: enhanced effectiveness of agent, absence of adverse effects.

SEDATIVE DRUG "SHALUN"

RU2133617

SUBSTANCE: invention relates to development of the mixed preparations. Sedative agent has medicinal substances Staphisagria, Cina and Chamomilla taken at equal dilutions (1:200) and neutral vehicle as sugar granules. Proposed agent does not induce allergic and adverse effects, somnolence, addiction and compatible with the conventional drug. EFFECT: enhanced effectiveness of the drug.

HOMEOPATHIC AGENT FOR PROPHYLAXIS AND TREATMENT OF ALCOHOLISM

RU94040297

FIELD: medicine, homeopathy, narcology. SUBSTANCE: invention proposes agent consisting of the following components: sulfuric acid D2-D5; sulfur D10-D30; arsenic D6-D30; lycopodium powder D12-D30; strychnine nut D12-D1000; lead D12-D30; rattlesnake venom D8-D30, and carbon bisulfide D8-D30. The use of agent ensures to obtain resistant recovery of alcoholism. EFFECT: enhanced effectiveness of agent.

MANUFACTURE OF HOMEOPATHIC DRUG

JPH02221227

PURPOSE: To prepare a therapeutic agent having the same homeopathy as that of a raw material without possessing the toxicity or pathogenicity present in the raw material by introducing a homeopathic first mother liquor into a composite mammary gland tissue of ungulates and taking out the second mother liquor from the tissue. CONSTITUTION: A (non)toxic or a (non)pathologic raw material is selected and an excipient without having irritation to a tissue (e.g. a physiological saline, distilled water or a purified whey) is used to prepare a solution and produce the first homeopathic mother liquor. The resultant mother liquor is then introduced into a composite mammary gland tissue of ungulates (preferably cattle) and the raw material solution is subsequently converted to the second mother liquor having characteristics of a sarcoid and the homeopathy of the first mother liquor. The second mother liquor is taken out of the tissue and large molecules, containing an antibody and having $\geq 0.2[\mu\text{m}]$ size are separated from the mother liquor and continuously diluted to 10^{-3} to 10^{-30} times. Thereby, the homeopathic product having $< 2,000$ molecular weight is obtained.

DRUG FOR HOMEOPATHY

JPH02207022

PURPOSE: To obtain the subject medicinal agent containing malic acid, citric acid and Thuja

tincture, having effect of promoting liver and gall functions and promoting the therapeutic effect of other homeopathic medicines. CONSTITUTION: This medicinal agent contains 23-27vol.% malic acid D11, 17-23vol.% citric acid D12 and 28-50vol.% Thuja tincture[phi]. This agent may also contain cinchona rinds D2; the blending proportions in this case are pref. as follows: malic acid D11: 23vol.%, citric acid D12: 17vol.%, cinchona rinds D2: 32vol.%, and Thuja tincture[phi]: 28vol.%. The D description is the indication of interpretation by the Germany Homeopathy Pharmacopoeia.

METHOD FOR THE TRANSFER OF FREQUENCIES TO SUBSTANCES VIA CRYSTALS AND PRODUCTION OF PHARMACEUTICAL REPARATIONS CONTAINING SAME FREQUENCIES

GR1004816

The invention relates to a method of transferring frequencies containing various crystals to substances such as water, polar dyalizers, creams and binding substances used for the production of cosmetics and pharmaceutical preparations containing same frequencies. The innovation of the invention consists in the use of crystals employed as resonance material and frequencies filter and in the transfer and registering of frequencies on substrates such as water. The perfect geometrical nature of the crystal guarantees the stability of the information transferred to the substrates chiefly to water. In this manner, the introduction of frequencies into the human organism is not carried out by means of electrodes but by direct introduction of the precise substrate (water) in the human organism. Through the herein described method, the invention allows the production of water carrying information about basic homeopathetical substances so that a novel more liable homeopathy is created. Said frequencies transferred, for instance, by means of water to the human organism have a direct impact to the brain imposing a functional frequency by replacement of the pathological frequency of the body and limbs system/cerebral cortex.

Lotion for treating or preventing alopecia

FR2718027

Prod. (I) for treatment or prevention of alopecia, comprises a lotion contg. 25-40% extract of fresh burdock root (as normally used in homeopathy), \- 5% polyphenol cpds. including \- 20% caffeoyl-quinic acid and aq. alcohol.

Medicament for treating scoliosis e.g. by homeopathy

FR2692785

The use of an animal epiphysis or pineal gland extract (I) is claimed for prodn. of a medicament for treatment of scoliosis... In an example admin. of 3 homeopathic granules per day stopped development of a severe scoliosis in less than a month (no further detail given).

Centrifugal biological activation - of agents for eg homeopathy

FR2119797

The centrifuge comprises a fixed element of inverted conical section and a mobile element rotating about a vertical axis. In the process of the medicinal agent to be activated is fed gradually into the fixed receptacle and the diluent to dilute it by 10 or 100 times is projected centrifugally to meet the incoming liquid with a force at least equal to that of a drop of water falling freely through a distance of 1 m.

Application of haloacetic acids in homeopathic doses

EP0060195

Compositions for homeopathic remedy, characterized in that they contain at least one of the halogeno-acetic acids of formula : see diagramm : EP0060195,P5,F1 (in which R1 , R2 , R3 are a hydrogen or halogen atom, at least one of the radicals is a halogen atom, and, when two or three among these radicals each are a halogen, they may be identical or different), at dilutions within the range normally used in homeopathy

Use of Capsicum annuum composition in homeopathy

DE19729561

Use of Capsicum annuum composition at homeopathic potency D3 or D4 for the treatment of vasomotor rhinopathy, is new.

AGENT FOR TREATMENT OF BENIGN TUMOR

RU2207868

SUBSTANCE: invention relates to the use of pharmacological agents for treatment of patients with benign tumors. Invention proposes to use the rhododendron homeopathic preparation as agent for treatment of benign tumors. The application of preparation in different potencies recovers some row of benign tumors, such as uterus myoma, mastopathy, ovary cyst, adenoma, nodular goiter.

CURATIVE-PROPHYLACTIC AGENT

RU2202359

SUBSTANCE: invention relates to the development of curative-prophylactic agent. The proposed agent comprises propolis and the following biologically active substance: ozocerite resin, bee wax, honey, peppermint oil, eucalyptus oil, rape oil, common wormwood essential oil, mountain-ash oil, thyme essential oil, tocopherol acetate, butylhydroxyanisole and an aqueous-spirituos extract of vegetable raw comprising the following plant extracts taken in equal ratios: common ginseng, perforated Saint-John's- wort, wild rose, medicinal potmarigold, medicinal matricary, common milfoil, caraway taken in the definite ratio of indicated components. Except for, the invention proposes a pharmaceutical preparation for topical application presenting the above indicated curative-prophylactic agent as capsule. Capsule shows cylindrical form and opened from one side, cylinder diameter is 45-48 mm, height is 5-7 mm, corpus wall thickness is 2-4 mm, basis is 1-3 mm. Mass of curative-prophylactic agent is 1-3 g and total mass is 6-10 g. Agent doesn't cause by-side effects and compatible with naturopathic treatment agents completely: phytotherapy, homeopathy, physical therapy, dietotherapy, hunger therapy and so on. EFFECT: enhanced effectiveness and valuable medicinal properties of agent.

MEDICINAL AGENT AND METHOD OF TREATMENT OF PATHOLOGICAL SYNDROME CAUSED BY HEMOPOIESIS DISTURBANCE

RU2205026

SUBSTANCE: invention proposes medicinal agent containing supersmall doses of monoclonal, polyclonal or natural antibodies in activated form raised to granulocytic colony-forming factor prepared by multiple successive dilution and external impact being mainly by

homeopathic technology. Invention relates also to method of treatment of pathological syndrome caused by hemopoiesis disturbance by administration of indicated medicinal agent. Invention provides the development of effective preparation for treatment and prophylaxis of acute and chronic diseases associated with disturbance of hemopoiesis and eliciting specific pharmacological activity, absence of adverse effects, ecological purity and low cost. Invention can be used for treatment and prophylaxis of acute and chronic diseases associated with disturbance of hemopoiesis being mainly granulocytopoiesis.

HOMEOPATHIC MEDICINAL GEL FOR TREATMENT OF INFLAMMATION AND PAIN IN ARTICULATION AND BACKBONE RU2214262

SUBSTANCE: invention relates to combined homeopathic preparations with chondroprotective and chondrostimulating effect and can be used in treatment of inflammation and pain in articulations and backbone. Invention proposes homeopathic medicinal agent as a gel for treatment of inflammation and pain in articulations and backbone that comprises Rhus toxicodendron, Hypericum, Ledum, Arnica, Syntphytum, Belladonna and Betula taken in equal ratios in dilution value C6 and burdock oily extract, in g/100 g of gel. Agent recovers mobility of articulations rapidly, shows analgetic effect and can be used in ligaments sprains, muscle pains, tendinitis and so on.

HOMEOPATHIC PREPARATION FOR TREATMENT OF NON-INSULIN-DEPENDENT DIABETES MELLITUS RU2217149

SUBSTANCE: the proposed preparation represents arsenous acid anhydride, sulfuric acid and calcium carbonate alcoholic solution. Preparation promotes to reducing period in treatment of non-insulin-dependent diabetes mellitus, diminishing adverse effects in prolonged intake of pharmacological sugar-reducing substances.

METHOD OF CORRECTION OF IMMUNE RESPONSE AND MEDICINAL AGENT RU2205025

SUBSTANCE: invention relates to method of correction of immune response by administration of activated forms of supersmall doses of monoclonal, polyclonal immune or natural antibodies raised to antigen of the main histocompatibility complex or to antigen complex and associated with its peptide obtained by multiple successive dilution and external effect. Medicinal agent for correction of immune response comprises activated form of supersmall doses of monoclonal, polyclonal immune or natural antibodies raised to antigen of the main histocompatibility complex and associated with its peptide obtained by multiple successive dilution and external effect being mainly by homeopathic technology. Method provides enhancement of efficiency of immune response correction and development of effective and safety medicinal agent eliciting specific pharmacological activity, absence of adverse effects, ecological purity and low cost. Invention can be used for preparing medicinal preparations without expressed adverse effects and treatment of different diseases accompanying with immune response disturbance.

MEDICINAL AGENT AND METHOD FOR TREATMENT OF DEPRESSIVE DISTURBANCES

RU2209084

SUBSTANCE: invention relates to a medicinal agent used for treatment of patients with neurotic and psychotic disturbances with depressive symptomatology that comprises a mixture of two components. One component represents activated form of supersmall doses of monoclonal, polyclonal, immune or natural antibodies raised to brain-specific protein S- 100 and another component represents activated form of supersmall doses of monoclonal, polyclonal, immune or natural antibodies raised to delta sleep-inducing peptide. Activated forms are prepared by multiple successive dilution and external effect being by homeopathic technology mainly. Invention relates also to method for treatment of patients with neurotic and psychotic disturbances with depressive symptomatology that involves administration of a mixture of two components one of that represents activated form of supersmall doses of monoclonal, polyclonal, immune or natural antibodies raised to brain-specific protein S- 100 and another the activated form of supersmall doses of monoclonal, polyclonal, immune or natural antibodies raised to delta sleep-inducing peptide. These activated forms are prepared by multiple successive dilution and external effect being by homeopathic technology mainly. Invention allows preparing a curative agent without expressed adverse effects and can be used for treatment of patients with depressive disturbances.

METHOD OF COUGH SYNDROME TREATMENT**RU2206338**

SUBSTANCE: invention relates to cough treatment. Method involves administration in body the activated form of antibodies raised to morphine taken in small or supersmall doses prepared by multiple successive dilution and external effect by homeopathic technology. Method allows to eliminate cough rapidly due to effect on central links of cough reflex being without adverse effects

**METHOD OF HOMEOPATHIC AGENT "GRANULAE GLOBULAE" PREPARING
RU2195270**

SUBSTANCE: invention relates to methods of homeopathic agents preparing. Two variants are proposed. Aqueous-spirituos or aqueous extracts or triturations of individual active substance or complex of active substances are potentiated once or more times making the motion "twisting funnel" for 2-3 min. The penultimate dilution is carried out in sugar syrup and active substance or complex of active substances are applied on sugar grit. In the method of preparing homeopathic complex of active substances an active substance with the maximal dilution degree is potentiated preliminary.

HOMEOPATHIC PREPARATION FOR TREATING MYOPIA**RU2203674**

SUBSTANCE: the innovation deals with homeopathic preparations used in the field of ophthalmology in treating myopia of I, II and III degree. It is suggested to apply preparation containing Acidum phosphoricum, Cuprum metallicum, Gelsemium, Magnesia phosphorica taken in equal ratios at C6 dilution, moreover, this preparation is designed in the form of sugar granules. It has no side effects, contraindications for usage, it could be combined with other therapeutic methods and preparations and could be, also, applied in monotherapy.

CURATIVE-PROPHYLACTIC AGENT FROM LINDEN LEAVES FOLIA TILIA

AND METHOD FOR PREPARING EXTRACTIVE SUBSTANCES

RU2213570

SUBSTANCE: invention proposes agent that represents an aqueous extract from linden leaves collected for phase from onset of buds frondescence to defoliation and comprises the following ratio of components, wt.-%: extractive substances, 0.1-47; ethyl alcohol and purified water, the balance. Method for preparing involves extraction with water firstly, then with 15-96% ethyl alcohol at 40-90 C by method of fractional maceration or percolation for 1-168 h in the ratio raw : extractant = 1 : (5-100). Obtained extracts are combined and total extractive substances are isolated. Invention relates to curative- -prophylactic agents for internal and external application that elicit the general tonic, anti-inflammatory, wound-healing, detoxifying, antibacterial, anti-anginal, anti-atherosclerotic, antioxidant, antihypoxic, neuroprotective, sedative, cardioprotective, anti-arrhythmic, angioprotective, stress-protective, immunotropic, antifungal, nephroprotective, hepatoprotective, gastroprotective, ferveprotective, membrane-protective, frigoprotective, radioprotective, retinoprotective and anti-surdity effects. Invention provides realization of indicated designation.

HOMEOPATHIC MEDICINAL AGENT

RU2184537

SUBSTANCE: invention relates to technology of drug preparing and can be used in preparing homeopathic medicinal preparations. Homeopathic medicinal agent comprises a neutral carrier and an active medicinal component prepared by homeopathic technology from the parent substance by successive multiple dilution or grinding and external mechanical effect including a mixture of different homeopathic dilutions of the single parent substance.

"REJUVENATING" HOMEOPATHIC ANTIOXIDANT PREPARATION

RU2203067

SUBSTANCE: preparation could be applied as curative-prophylactic remedy at diseases accompanied by activation of lipid peroxidation (LP) processes and accumulation of LP products in organs and tissues. It is suggested a homeopathic antioxidant preparation containing Ferrum iodatum, Carbo vegetabilis, Lachesis taken in equal ratios at C6 dilution, moreover, it is designed in the form of sugar granules. The present preparation has no side effects, contraindications and allergic reactions and could be applied in clinical and geriatric practice.

MEDICINAL AGENT AND METHOD OF TREATMENT OF ASTHENIC STATES

RU2197267

SUBSTANCE: invention relates to medicinal agent comprising the potentiated activated form of antibodies raised to antigenic material of Altai stag lyophilized serum blood taken off in period of velvet antlers cutting in small and supersmall doses and prepared by multiple successive dilution and by external effect being mainly by homeopathic technology. Invention relates also to method of treatment of different asthenic states using the proposed effective and safety agent for treatment of asthenic states of different etiology and no inducing the tolerance. Invention can be used for treatment of asthenic states of different etiology. **EFFECT:** enhanced effectiveness of agent and treatment.

METHOD OF CHOOSING HOMEOPATHIC DRUG

RU2229840

SUBSTANCE: one preliminarily concludes about the stage of disease, which one is dealing with, after which one additionally makes a cosmophysical model of disease for the time of the first visit of the patient. Fire, air, earth, and water elements manifested in this model are estimated and abnormal elements allow selecting origin of drug and its miasmatic attribute. **EFFECT:** increased objectivity of estimating patient's state and individualization in choice of drug, which is appropriate for disease in each particular case.

MEDICINAL AGENT AND METHOD OF TREATMENT OF EROSION AND INFLAMMATORY DISEASES OF GASTROENTERIC TRACT**RU2197266**

SUBSTANCE: invention relates to medicinal agent based on antibodies and comprising activated form of monoclonal, polyclonal or natural antibodies raised to histamine and taken in small or supersmall doses and prepared by multiple successive dilution and by external effect being mainly by homeopathic technology using mixture of different mainly hundredth homeopathic dilutions. Invention relates also to method of treatment of erosive and inflammatory diseases of gastroenteric tract by modifying effect on metabolism of histamine and effects of histamine mediated by histamine receptors. Method involves the use of activated forms of supersmall doses of antibodies raised to histamine prepared by multiple successive dilution and by external effect. Invention provides the development of effective preparation for treatment of erosive and inflammatory disease of gastroenteric tract and no inducing any adverse effects. Invention can be used for treatment and prophylaxis of erosive and inflammatory diseases of gastroenteric tract. **EFFECT:** enhanced effectiveness of agent.

MEDICINAL AGENT AND METHOD OF TREATMENT OF HEPATOBILIARY SYSTEM DISORDER**RU2197265**

SUBSTANCE: invention relates to a medicinal agent comprising activated form of monoclonal, polyclonal or natural antibodies raised to cholecystokinin used in small or supersmall doses prepared by multiple successive dilution and by external effect being carried out by homeopathic technology. Invention relates also to method of treatment of functions of hepatobiliary system by modification of effects of endogenous cholecystokinin that involves the use of activated forms of antibodies raised to cholecystokinin taken in small and supersmall doses prepared by successive dilution and by external effect being preferably in different but preferable hundredth homeopathic dilutions of indicated antibodies. Invention provides the development of effective, safety agent used for treatment of damages of hepatobiliary system function and no causing the formation of tolerance. Invention can be used for treatment of damages of function of hepatobiliary system of different etiology.

MEDICINAL AGENT AND METHOD OF TREATMENT OF PATHOLOGICAL SYNDROME CAUSED BY HEMOPOIESIS IMPAIRMENT**RU2192882**

SUBSTANCE: invention relates to the developed antibody-base medicinal agent that comprises activated form of supersmall doses of monoclonal, polyclonal or natural antibodies raised to erythropoietin prepared by multiple successive dilution and external effect, mainly by homeopathic technology. For preparing antibodies human or heterogeneous alpha-, beta- or omega-erythropoietin, among them, recombinant or genetic engineering one is used being

mixture of different, mainly, hundredth dilutions is used. Invention can be used for treatment and prophylaxis of acute and chronic diseases associated with hemopoiesis impairment, mainly, erythropoiesis.

HOMEOPATHIC DRUG "PEONIYA-PLUS MULTIGRAN" FOR TREATMENT OF PATIENTS WITH VARICOSITY AND HEMORRHOID RU2143271

SUBSTANCE: invention relates to the development of complex homeopathic agents used for treatment of patients with varicosity and hemorrhoid. The agent has Hamamelis virginiana C3, Acidum nitricum C3, Krameria triandra C3, Paeonia officinalis C3, Arnica montana C3, Aesculus hippocastanum C3 being all components are taken at equal parts. An agent can be made as sugar granules. Treatment with this agent results to disappearance of pains, edemas, decrease of bleeding and loss of gastrocnemius muscle convulsions.

HOMEOPATHIC DRUG FOR TREATMENT OF PATIENT WITH PARASITIC CHOLECYSTITIS RU2144372

SUBSTANCE: invention relates to development of homeopathic drug that can be used for treatment of patients with parasitic cholecystitis. Composition consists of Artemisia vulgaris, Chenopodium anthelminticum, Tanacetum vulgare, Juglans regia taken at equal ratio at the following dilutions: Artemisia vulgaris D3, Chenopodium anthelminticum D3, Tanacetum vulgare D3, Juglans regia C12. Composition is the homeopathic drug as sugar granules. Agent promotes to recovery of body adaptogenic response due to interaddition and enhancement of complex effect of its components.

HOMEOPATHIC DRUG FOR TREATMENT OF PATIENTS WITH PARASITIC CHOLECYSTITIS RU2144371

SUBSTANCE: invention relates to development of homeopathic drug that can be used for treatment of patients with parasitic cholecystitis. Composition consists of Chenopodium anthelminticum, Schoenocaulon officinale A. Gray, Granatum, Juglans regia taken at equal ratios at the following dilution: Chenopodium anthelminticum D3, Schoenocaulon officinale A. Gray C6, Granatum C6, Juglans regia C12. Composition is the homeopathic drug as sugar granules. Treatment of patients with proposed drug results to the absence of parasites in duodenum content in 87% of patients.

METHOD FOR OPTIMIZATION OF THERAPY WITH COMPLEX HOMEOPATHIC PREPARATIONS RU2194521

SUBSTANCE: the innovation deals with choosing an optimal therapeutic scheme with complex homeopathic preparations. For this purpose chosen basic homeopathic preparations are supplemented with other complex homeopathic preparations in accordance with the principles of antihomotoxic therapy. Moreover, while selecting the preparations, one should comply with a homeopathic accord row of their components. The innovation enables to carry out individual selection of the complex homeopathic preparations. EFFECT: higher efficiency.

HOMEOPATHIC MEDICINAL PREPARATION TO TREAT AND PREVENT JUVENILE ADENOVIRAL INFECTION

RU2179857

SUBSTANCE: the suggested homeopathic preparation contains Bryonia Pulsatilla and Hepar sulfur at equal weight ratio of alcoholic hundredth dilutions, predominantly D 30. **EFFECT:** higher efficiency to prevent generalization of infection, development of bacterial complications, modify humoral and cellular immunological reactions which promote viral elimination.

HOMEOPATHIC PREPARATION FOR TREATMENT AND PROPHYLAXIS OF JUVENILE ADENOVIRAL INFECTIONS

RU2177795

SUBSTANCE: homeopathic preparation contains Aconitum napellus (Aconitum), Atropa belladonna, Arsenicum iodatum and Ferrum phosphoricum at equal mass weight ratio of alcoholic hundredth dilutions, mainly D 30. **EFFECT:** homeopathic preparation prevents infection generalization by decreasing hyperergic reactions and stimulating effectory chain of antiviral immunity.

HOMEOPATHIC PREPARATION FOR TREATMENT AND PROPHYLAXIS OF JUVENILE UPPER RESPIRATORY TRACT DISEASES

RU2177794

SUBSTANCE: homeopathic preparation is suggested that contains Belladonna, Phytolacca, Hepar sulfur and Silicea. It is prepared as a caramel supplemented with components taken at equal mass weight portions at the following ratio of alcoholic dilutions: Belladonna D 30, Phytolacca D 24, Hepar sulfur D 12, Silicea D 12. **EFFECT:** preparation enables to remove rapidly acute inflammation, prevents complications and modulates immunological reactions.

DEVICE FOR MODULATION OF ENERGY ACTIONS

RU2195339

FIELD: medical devices for protection of living organisms against the action of external energy fields with simultaneous action on organisms by energoinformation spectrum of radiations selected with the use of the known methods of homeopathy; in particular, it may be used as a means of human protection against negative energy actions arising in the work with electronic equipment, as well as for production of positive weak energy fields for treatment of diseases of various etiology or sustaining of a definite tonus of the patient. **SUBSTANCE:** device has a base with a container for placement of medicinal preparation with a cover and applicator of conducting material having the shape of a star. The applicator is made in the form of a hollow volumetric symmetrical star clad by noble metals. The device has also the second base accommodating three flat applicators in the form of a ring, rectilinear square and star, whose dimensions and shape are similar to the base of the volumetric star. The applicator for placement of medicinal preparations is positioned on the first base inside it and closed with a flat cover flush with the plane of the upper surface of the base, positioned on the second base on its one side is a flat star with a hollow volumetric star installed on it with formation of an inner cavity between them filled with magnetic material, a ring is located around the star maximum approached to the star prongs, but having no contact with it, a square is located on the other side, the first base is installed above the second one so that the

container is positioned above the star, the free space between the bases is filled with insulating material with a low specific gravity. EFFECT: enhanced efficiency of action.

METHOD FOR CARRYING OUT CONSERVATIVE TREATMENT OF BLUNT INJURY OF THE EYEBALL AGGRAVATED WITH INTRAOCULAR HEMORRHAGE

RU2204401

SUBSTANCE: method involves administering Traumel S preparation combined with classic homeopathy preparation Phosphorus.

METHOD OF QUALITATIVE DETERMINATION OF HOMEOPATHIC MEDICINAL PREPARATION OR POTENTIATED FORM OF SUBSTANCE

RU2195648

SUBSTANCE: invention relates to a field of research of medicinal preparations and can be used for qualitative analysis of homeopathic medicinal preparation or potentiated form of substance. Method involves the use of a set of the known substances which are like or similar by their structure and/or composition with homeopathic medicinal preparation or to substance in potentiated form to be determined, and antibodies raised to these known substances. Identification of the homeopathic medicinal preparation or potentiated form of substance is performed by the known substance that reacts with corresponding antibody after addition to reaction medium of homeopathic medicinal preparation or potentiated form of substance and results to alternations recording by immunochemical methods of analysis based on reaction "antigen-antibody". Invention provides the development of technologically simple, reliable and effective method of qualitative determination of preparation or potentiated form of substance.

METHOD FOR CARRYING OUT ALCOHOL ADDICTION SYNDROME PATIENTS REHABILITATION

RU2165774

SUBSTANCE: method involves applying complex anti-alcohol therapy program including reflex zone stimulation, medicamentous therapy and psychotherapy. Homeopathic treatment is introduced into the program. Propoten 100, Nux vomica C6 and Acidum sulfuricum C6 are applied within the first 7-8 days at a dose of 5 grains twice a day. Then, Syphilinum 200 C preparation is administered during the next 7-8 days at a dose of 7 grains once a day, Quercus 30 C at a dose of 5 grains 3 times a day and Nux vomica 3 C at a dose of 5 grains 3 times a day. Nux vomica 3 C is given at a dose of 5 grains 3 times a day during the following 12-13 days. Constitutional preparation is administered during the next 30 days in C30 dilution with Nux vomica 6 C at a dose of 7 grains once a day and postrehabilitation Propoten 100 administration at a dose of 7 grains once a day in three courses. The latter is taken during one month with one month long pause following. Nux vomica 6 C is administered at a dose of 7 grains once a day in four courses with one month taking the preparation and one month long pause. The constitutional preparation is taken in 200-100:1 dilutions at a dose of 5 grains once each second day during three month. Phytotherapy course involves taking decoctions prepared with Asarum root, lamb succory, Salix, bearberry, wormwood, thyme, Origanum, mistletoe, Leonorus, valerian, German camomile, passion flora. Baths are taken with St. John's wort, ginseng root, calendula, pepper mint decoctions added. Psychomuscular training is applied involving psychic and muscular relaxation assuming postures and respiratory

exercises like tree, shavasana, anuloma-viloma, organism vitalization, meditation according to Yoga and Chinese Ci-gong system. Self-analysis verbalization exercises are introduced into psychotherapy course under physician control. Rehabilitation stages are not less than 60 days long. Certain schedule is to be followed. The first two days are spent in building suggestion for rehabilitation. Reflex therapy is applied from the second to eighth day, homeopathy from the second to the sixtieth day. General phytotherapy is applied from the eighth to fifty ninth day, psychomuscular training is applied from the thirty ninth to the fifty ninth day, respiratory exercises are administered from the thirty ninth to the fifty ninth day, psychotherapy from the fifty fifth to the fifty ninth day, sober life mode suggestion is applied at the sixtieth day. EFFECT: enhanced effectiveness of treatment course.

HOMEOPATHIC AGENT FOR CORNEAL OPACITY RESOLUTION

RU2167667

SUBSTANCE: invention proposes agent containing Calcarea fluorica, Arnica, Conium in the definite dilutions and sugar as a neutral carrier. Claimed preparation ensures to decrease time of opacity resolution, recover vision in large percent of cases. Also, agent has no contraindications, it does not show allergic responses and can be used both in monotherapy and in combination with other drugs.

HOMEOPATHIC MEDICINAL AGENT REGULATING METABOLIC PROCESSES IN ANIMALS

RU2164798

SUBSTANCE: homeopathic agent regulating metabolic processes has Lycopodium, Arsenicum and Phosphorus taken in the ratio 1:1:3, respectively, in the definite dilution of components, in parts: Lycopodium D8-1, Arsenicum D12-1 and Phosphorus D30-1. Invention can be used for treatment of animals with immuno-deficiency states and degenerative processes. EFFECT: broadened spectrum of pharmacological effect, absence of adverse symptoms and complications.

HOMEOPATHIC AGENT FOR TREATMENT OF PATIENTS WITH KERATITIS

RU2167666

SUBSTANCE: agent has Mercurius corrosivus, Belladonna, Apis, Silicea taken in equal ratios in the dilution C3. Conium can be added to homeopathic agent if necessary. Proposed agent ensures to arrest acute inflammation for some hours, rapid and effective treatment of keratitis of different forms in patients of all age groups. Invention can be used for treatment of patients with keratitis of different etiology (traumatic, viral, bacterial and so on).

HOMEOPATHIC DRUG FOR TREATMENT OF PATIENT WITH OSTEOARTICULAR PATHOLOGY

RU2162334

SUBSTANCE: invention relates to development of homeopathic drug which can be used in osteoarticular pathology (osteoarthrosis, osteochondrosis, arthrosis, arthritis). Composition has the following components: Berberis vulgaris (common barberry), Calcium phosphoricum (calcium phosphate), Solanum dulcamara (bitter-sweet), Rhus toxicodendron (oak-leaved toxicodendron), Causticum (soda caustic) taken in equal ratios and in dilution C12. Composition is the homeopathic drug made as sugar granules. Homeopathic drug shows

many-sided effects on body: it normalizes metabolic processes in osseous tissue and articular tissues, improves blood supply of osseous tissue, articular ligamentous apparatus, decreases inflammatory processes in articulations, edema, relieves pain syndrome, improves articulation mobility. Preparation does not cause complications in prolonged using. EFFECT: enhanced effectiveness of preparation, valuable medicinal properties.

HOMEOPATHIC DRUG FOR TREATMENT OF PATIENT WITH ATHEROSCLEROSIS OF CORONARY AND CEREBRAL VESSELS RU2162333

SUBSTANCE: invention relates to development of homeopathic drug. Composition has *Lycopodium* (mace-liked club-moss), *Aurum iodatum* (gold iodide), *Barium carbonicum* (barium carbonate), *Allium sativum* (garlic) taken in the equal ratio in dilution C12. Composition is the homeopathic drug made as sugar granules. Homeopathic preparation improves the state of scleroid vessel wall, stabilizes arterial pressure, improves circulation in tissue and organs, among them in brain vessels, normalizes blood cholesterol level, improves memory, decreases vertigo, head noise, improves mood, decreases depression with fear. Preparation can be recommended both in early stages of atherosclerosis as independent therapy and in the combined therapy in severe heart and brain vessels damages. **EFFECT:** enhanced effectiveness of drug, valuable medicinal properties.

HOMEOPATHIC DRUG FOR TREATMENT OF PATIENT WITH ISCHEMIC HEART DISEASE RU2162332

SUBSTANCE: invention proposes the composition containing smoothed hawthorn, antihelminthic *spigelia*, cactus, phosphorus, medicinal valerian and *ignatia* taken in the equal ratio in the following dilutions: *Valeriana officinalis* (medicinal valerian) C3, *Strychnos ignatii* (*nux vomiva ignatia*) C12, *Selenicerius grandifloris* (cactus large-flowered *selenicerius*) C12, *Spigelia anthelmia* (antihelminthic *spigelia*) C12, *Phosphorus* (phosphorus) C12, *Crataegus oxyacantha* (smoothed hawthorn) C12. Composition is the homeopathic drug made as sugar granules. Homeopathic preparation shows regulating effect, enhances functional activity of myocardium under overloadings and physiological aging processes. Preparation is used in gerontological practice at non-severe heart damages as independent therapy with success. At severe course of disease its using with the combined therapy provides to decrease the dose of allopathic preparations and avoid their adverse effects. Invention can be used for development of homeopathic drug for treatment of patients with ischemic heart disease, initial stage of cardiac insufficiency, transient hypertension, myocardiodystrophy, aberrant rhythm and cardioneurosis in the complex therapy.

HOMEOPATHIC AGENT FOR SPASM OF ACCOMMODATION TREATMENT RU2150288

SUBSTANCE: agent has medicinal substances prepared by homeopathy procedure and taken in potentiated doses and neutral carrier. Agent has *Secale cornutum*, *Agaricus*, *Silicea* as drugs and additionally it has *Magnesia phosphorica* and *Arnica* depending on patient age, visual loading and type of vegetovascular dystonia course. All medicinal components are taken in dilution C6. Agent ensures to eliminate ciliary muscle spasm, enhance effectiveness of spasm of accommodation treatment, prolong remission periods, prevent relapses of accommodative pseudo-myopia. Agent shows the purposeful effect on ciliary muscle,

normalizing its tonus and increasing its working ability, and on vegetative nervous system eliminating its disbalance.

METHOD FOR ADMINISTERING A MEDICINE

RU2150278

SUBSTANCE: method involves introducing medicine into organism with curative water in taking bath at 35-45 C. Potentiated form of medicine is used that is produced by multiple successive dilutions and shakings according to homeopathy method. 1:100 dilution form is mainly of use. It is applied by being added in the amount of 50-500 ml per 1 m³ of curative water. EFFECT: enhanced effectiveness of treatment; reduced risk of adverse side effects.

HOMEOPATHIC MEDICINAL AGENT FOR TREATMENT OF POLYARTHRITIS, ARTHROSIS, RHEUMATISM

RU2153348

SUBSTANCE: invention relates to development of complex homeopathic medicinal agents used for treatment of patients with polyarthritis, arthrosis and rheumatism. Proposed agent has Rhus toxicodendron C3, Colchicum autumnale C3, Lithium carbonicum C3, Hepar sulfuris C6, Lycopodium clavatum C3, Calcarea fluorica C6 and all components are taken in equal parts. Agent can be made as sugar granules. Treatment with proposed agent results to improvement of state and health of patients, remission of disease and then its regression, joint pains are weakened, joint contracture is diminished slowly. Except for, cartilage and osseous tissues are raised, damaged joints are recovered and their deformation is disappeared in patients with less of 3 years of disease.

HOMEOPATHIC MEDICINAL AGENT FOR TREATMENT OF IMPOTENCY

RU2153347

SUBSTANCE: invention relates to development of complex homeopathic agents used for treatment of patients with impotency. Proposed agent has Vitex agnuscastus C3, Yohimbinum C3, Panax pseudoginseng C3, Acidum phosphoricum C3, Turnera diffusa C3 and Nuphar lutea C3 and all components are taken in equal parts. Agent can be made as sugar granules. Treatment with proposed agent results to improvement of the general state: depressions are disappeared gradually, sleep is normalized, nervous excitement is disappeared, inflammatory symptoms in urogenital organs are decreased or disappeared, calcium content in osseous tissue is increased, level of 17-ketosteroids in urine is increased up to physiological norm, function of male gonads is recovered that results to sexual potency recovery. EFFECT: enhanced effectiveness of agent.

HOMEOPATHIC DRUG FOR TREATMENT OF CLIMACTERIC MENOPAUSE

RU2152796

SUBSTANCE: invention relates to development of agents with extrogenic anticlimatecium effect. Proposed agent has Conium maculatum C6, Glonoinum C3, Lachesis mutus C6, Sanguinaria canadensis C3, Zincum valerianicum C6 and Pilocarpus jaborandi C3 being all components are taken in equal parts. Agent can be made as sugar granules. Treatment with proposed agent results to improvement of the general state of patient, neurotic symptoms are disappeared and replaced with equilibrium behavior, headache is disappeared, patients have sense of quiet assurance and comfort.

HOMEOPATHIC DRUG FOR PROPHYLAXIS AND TREATMENT OF ALOPECIA RU2151603

SUBSTANCE: invention relates to development of complex homeopathic agents for prophylaxis and treatment of hair falling out, strengthening and improvement of hair structure. Proposed agent has Phosphorus C4, Sulfur C4, Thallium aceticum C4, Graphites C4, Selenium C4, Silicea C4 and components are taken in equal parts. Agent can be made as sugar granules. Proposed agent is effective both in alopecia areata and alopecia seborrhea. In the case of alopecia areata treatment results to decrease and disappearance of alopecia foci, recovery of normal cycle of hair growth and newly growing hair have normal structure. In alopecia seborrhea treatment with proposed agent results to decrease and then to disappearance of fat dandruff, pathological skin color on lateral forehead and parietal region surfaces is disappeared and growth of health hair occurs in alopecia region.

HOMEOPATHIC DRUG FOR TREATMENT OF ALCOHOLIC DEPENDENCY RU2151610

SUBSTANCE: invention relates to development of complex homeopathic agents used for treatment of alcoholic dependency. Invention proposes agent that has Acidum sulfuricum C6, Strychnos nux vomica C6, Asarum europaeum C3, Artemisia absinthium C6, Cinchona officinalis C3, Passiflora incarnata C6 and components are taken in equal parts. Agent can be made as sugar granules. Treatment with proposed agent results to improvement of the general state and state of health, headache and convulsing tremors in limbs ceasing, recovery of heart rhythm contractility, disappearance of vertigo, nausea, vomiting, partial normalization of liver function, normalization of psychoemotional sphere and complete ceasing alcohol intake in part of patients. Symptoms of general intoxication are disappeared in all patients, working capacity is increased, sleep and appetite are normalized. Proposed agent can be used for both treatment and prophylaxis of alcoholic dependency and retains possibility of alcohol intake in reasonable limits and eliminates the development of alcoholic dependency.

METHOD FOR CHOOSING MEDICINAL PREPARATIONS IN THE TREATMENT OF A PATIENT RU2185776

SUBSTANCE: the diagnostics of symptoms is conducted, patient's psychotype is established to choose such homeopathic preparations corresponding to patient's psychotype. Efficiency control is performed due to, at least, one psychological test and intervalocardiography method to detect the Bajevsky' potential index. As psychological test one should use Lusher and/or Garbuzov and/or Izenk tests to detect the level of subjective control. As psychophysical test it is used the test to distinguish the lengths of, at least, two line segments being different in their length by 2.5 and 10% and equal segments. According to higher percentage of differences one should conclude on proper prescription of preparations

HOMEOPATHIC DRUG "KRATEGUS-PLUS MULTIGRAN" FOR TREATMENT OF PATIENT WITH ARTERIAL HYPERTENSION RU2143918

SUBSTANCE: invention relates to the development of complex homeopathic agents used for treatment of patients with arterial hypertension. The proposed agent has Crataegus C3, Strychnos ignatii C6, Rauwolfia serpentina C3, Viscum album C3, Gnaphalium arenarium C3

and Gelsemium sempervirens C3 being all components are taken at equal parts. An agent can be made as sugar granules. An agent shows the effectiveness for treatment of patients with arterial hypertension, heart rhythm disorders, cardiac overloadings, recovers the heart muscle activity weakened by the born infectious sicknesses, improves cardiovascular activity in total. EFFECT: enhanced effectiveness of the drug.

HOMEOPATHIC DRUG FOR TREATMENT OF PATIENT WITH INFLUENZA AND ACUTE RESPIRATORY VIRAL INFECTIONS

RU2143917

SUBSTANCE: invention relates to the development of complex homeopathic agents for treatment of patients with influenza and acute respiratory viral infections. The proposed agent has Aconitum C3, Bryonia C3, Atropa belladonna C3, China C3, Baptisia tinctoria C3, Gelsemium sempervirens C3, Allium cepa C3, Echinacea angustifolia C6, Rhus toxicodendron C3 being all components are taken at equal parts. An agent can be made as sugar granules. Treatment with the proposed agent results to the improvement of the general state, complete disappearance of common cold, cough, hoarsenesses (by auscultation test), breathing becomes vesicular, erythrocyte rate precipitation value is normalized, muscle pains are disappeared, appetite and sleep are improved. The total intoxication syndrome is disappeared and respiratory system is recovered completely.

DRUG FOR TREATMENT OF ERECTION DISORDER

RU2146940

SUBSTANCE: agent has plant components taken at equal ratio and definite dilution: Agnus castus, Berberis vulgaris, Conium maculatum, Lycopodium clavatum. Agent eliminates erectile dysfunction, recovers adequate response for sexual excitement, enhances orgasm, promotes to the more complete coitus satisfaction and enhances libido. EFFECT: enhanced effectiveness of agent, absence of adverse effects in therapy.

HOMEOPATHIC DRUG FOR TREATMENT OF PATIENTS WITH UROLITHIASIS AND RENAL LITHIASIS

RU2145868

SUBSTANCE: invention relates to development of complex homeopathic agents used for treatment of patients with urolithiasis. Proposed agent has Chelidonium majus C3, Berberis vulgaris C3, Nux vomica C3, Terebinthina larinica C3, Lithium carbonicum C6, Acidum nitricum C3 and all components are taken at equal parts. Agent can be made as sugar granules. Treatment with the proposed agent provides improvement of the general state of all patients, decrease of leukocyte counts in urine, disappearance of disuric disorders, temperature normalization, improvement of the state of health, increase of working capacity. EFFECT: enhanced effectiveness of agent.

HOMEOPATHIC DRUG FOR TREATMENT OF PATIENTS WITH LIVER DISEASES

RU2145867

SUBSTANCE: invention relates to development of complex agents used for treatment of patients with liver diseases. Proposed agent has Berberis vulgaris C3, Calcium carbonicum C30, Chelidonium majus C3, Taraxacum officinale C3, Strychnos nux vomica C3,

Podophyllum peltatum C3 and components are taken at equal parts. Agent can be made as sugar granules. Treatment with the proposed agent results to improvement of the state of health, disappearance or decrease of dyspeptic symptomocomplex, asthenic-vegetative syndrome, normalization of liver size, decrease of process activity (total arresting or decrease of cytolysis syndrome and cholestasis), improvement of protein-synthetic liver fraction and its absorptive and secretory function.

HOMEOPATHIC DRUG FOR LIPID METABOLISM NORMALIZATION RU2145866

SUBSTANCE: invention relates to development of complex agents used for treatment of patients with disorders of lipid metabolism. Proposed agent has Graphites C6, Hydrastis canadensis C3, Fucus vesiculosus C3, Phytolacca americana C3, Carbo vegetabilis C6, Prunus spinosa C3 and all components are taken at equal parts. Proposed agent can be made as sugar granules. Agent provides the normalization of total metabolism, patients show increased motility, working capacity, improvement of state of health. EFFECT: enhanced effectiveness of agent.

HOMEOPATHIC DRUG FOR TREATMENT OF PATIENTS WITH ECZEMA AND DIATHESIS RU2145865

SUBSTANCE: invention relates to development of complex agents used for treatment of patients with eczema and diathesis. Proposed agent has Calendula C3, Graphites C6, Apis mellifica C3, Urtica urens C3, Sulfur C3, Calcium carbonicum, Hahnemanni C6 and components are taken at equal parts. Agent can be made as sugar granules. Treatment with the proposed agent results to improvement of the general state, eczema signs disappear in light cases, damaged foci are improved in severe cases, no exacerbations or relapses of disease occurred for some years.

HOMEOPATHIC DRUG "AURUM-PLUS MULTIGRAN" FOR TREATMENT OF PATIENTS WITH ATHEROSCLEROSIS RU2143276

SUBSTANCE: invention relates to development of complex homeopathic agents used for treatment of patients with atherosclerosis. The agent has Arnica jodatum C3, Gelsemium sempervrens C3, Anamirta C3, Aurum jodatum C6, Barium jodatum C6, Barium chloratum C6 being all components are taken at equal parts. An agent can be made as sugar granules. Treatment of 45 patients with the agent resulted to decreased stenocardia attacks by 30%, positive dynamics of cholesterol level and the total blood cholesterol is decreased by 25%, the level of antiatherogenic lipoproteins that are responsible for removal of cholesterol from the vessel wall is increased up to value of physiological level (0.9-1.0 mmole/l in human plasma).

HOMEOPATHIC DRUG "VALERIANA-PLUS MULTIGRAN" FOR TREATMENT OF PATIENTS WITH INSOMNIA AND INCREASED NERVOUS EXCITABILITY RU2143275

SUBSTANCE: invention relates to development of complex homeopathic agents for treatment of patients with insomnia and increased excitability state. The agent has Valeriana

officinalis C3, Crataegus laevigata C3, Ignatia C6, Leonurus cardiaca C3, Passiflora incarnata C3, Hyoscyamus niger C6, Ambra grisea C6, Bromum C6, Zincum valerianicum C6 being all components are taken at equal parts. The agent can be made in the form of sugar granules. Treatment with the agent results to improvement of the general state, sleep normalization, decrease of nervous excitability and increase of working capacity.

HOMEOPATHIC DRUG "TABAKUM-PLUS MULTIGRAN" FOR TREATMENT OF PATIENTS WITH TOBACCO DEPENDENCE

RU2143274

SUBSTANCE: invention relates to development of complex homeopathic agents used for treatment of patients with tobacco dependence. The agent has Lobelia inflata C6, Nicotiana tabacum C3, Plantago major C3, Passiflora incarnata C3, Magnesium carbonicum C6, Sulfur C3 being all components are taken at equal parts. An agent can be made as sugar granules. Treatment with the agent eliminates mildly nicotine dependence and symptoms accompanying its are disappeared: irritability, nervous stress, depression, cough, dyspnea. Patients have the comfort state: no tendency to body weight increase occurs at decrease amount of number of smoking out cigarettes since the agent normalizes the metabolism simultaneously.

HOMEOPATHIC DRUG "EVKALIPT-PLUS MULTIGRAN" FOR TREATMENT OF PATIENTS WITH COUGH

RU2143273

SUBSTANCE: invention relates to the development of complex homeopathic agents used for treatment of cough. The agent has Antimonium and Kalium tartaricum C3, Eucalyptus globulus C3, Drosera rotundifolium C3, Bryonia dioica C3, Ipecacuanha C6, Rumex crispus C3 being all components are taken at equal parts. The agent can be made as sugar granules. Treatment with this agent results to improvement of general state of patients: disappearance of lancinating pains in thorax, cough attack arresting, decreased safety and inflammatory symptoms in upper respiratory ways, normalized blood formula.

HOMEOPATHIC DRUG "SAMBUKUS-PLUS MULTIGRAN" FOR TREATMENT OF PATIENTS WITH BRONCHIAL ASTHMA

RU2143272

SUBSTANCE: invention relates to the development of complex homeopathic agents used for treatment of patients with bronchial asthma. The agent has Bryonia dioica C3, Ephedra distachya C3, Lobelia inflata C3, Ambra grisea C6, Drosera rotundifolium C6, Sambucus niger C6 being all components are taken at equal parts. An agent can be made as sugar granules. Treatment of patients with agent results to decrease and arresting of asthma attacks, improvement of the general state of patients, decrease of activity of histaminase and blood plasma histamine level to the physiological values.
