WO 9523628

DEVICE FOR FORMING AN ENERGY FIELD

Inventor: TOLSTOI VLADIMIR STEPANOVICH

Also published as: AU7865694

Abstract -- The proposed device for forming an energy field comprises at least one collector (1) made up of a plurality of energy sources (2) arranged along a closed line and separated by gaps, with a central open area (6). The energy sources (2) are interconnected and can move in relation to each other.

DE 3433292

Apparatus for the directed deflection or screening of so-called earth radiation - geopathogenic zones

Inventor: VERZICHT DES ERFINDERS AUF NENNUNG

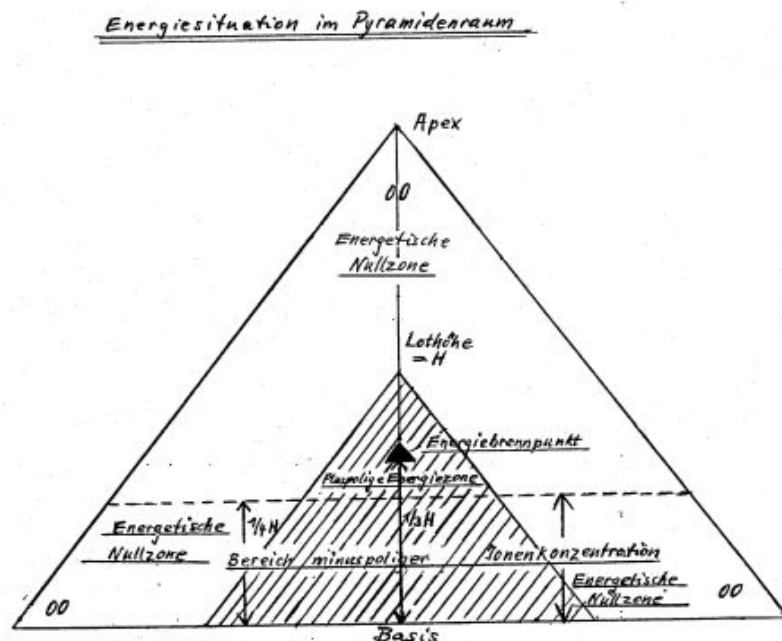

Abstract -- Antennas - bar antennas, V-shaped multiple-bar antennas, spirals, in connection with tubular sleeves which serve as wave guides and are or may be equipped with a ground reflector to increase their effect, emit all around a deflecting radiation or an interference radiation in the upright position in conjunction with a directional reflector mounted at the top, charged by a geopathic wave field. This radiation is capable in its effective range of drifting or neutralising other interfering stimuli/radiation caused by further interference zones (water veins, etc.). In the case of interference radiation/deflection radiation directed downwards due to a corresponding reflector shape there is no rod deflection above the erection site. In the case of interference radiation/deflection radiation directed upwards due to a corresponding reflector shape there is no rod deflection below the erection site. The effective range is influenced by the size of the antenna, the charge thereof (interference zone crossing) and by the shape of the reflector screen.

[DE 3525521](#)

[Pyramidal magnetic field device for the regulation of energy disturbances in the human body or for the continuous material recovery](#)

Inventor: KAUSCH OTTO

Abstract -- The device comprises, for example, a pyramid of dielectric material having the dimensions, as true to scale as possible, of the Cheops pyramid and in a size corresponding to the use to which it is put. The collector effect of the pyramid, one edge of which is to be aligned to magnetic north, bundles the positive pole energy of the magnetic earth field in the energy core of the device. As in a mirror image, "reflected" force fields with negative energy result above and below the pyramid. a) By appropriately positioning a person in, above or underneath the pyramid it is possible to supply the bundled energy resulting from the collector effect of the pyramid to the person in order to balance out energy disturbances of the body. b) If the subject-matter of the application is used for the continuous automatic material recovery a pyramid of appropriate size is to be fitted over the metal part (e.g. bearing) in such a way that the part is located within the energy core of the pyramid and

the pyramid is aligned to the direction of magnetic north/south.

DE 3823178

Device for collecting and selectively transmitting programmed radiesthetically measurable radiation, in particular, to the human body

Inventor: NEMITZ MANFRIED

Abstract -- The invention relates to a device for collecting and selectively transmitting programmed radiesthetically measurable radiation, in particular, to the human body. The device comprises three or four functional elements which are connected to one another, namely a pyramid-shaped body as a radiation collector, a vessel serving as radiation transmitter and a tubular radiation injector and, if appropriate, a radiation adapter.

DE 8460071

Device for accruing cosmobiological energy

Inventor: RUDHARDT, ELFRIEDE, 8960 KEMPTEN, DE

Abstract -- A hollow body (10) in the form of a regular pyramid with a square base has an outer attachment

(18) along its one bottom edge (14), on which attachment a magnetic compass (20) is secured, a marking (24; 25), provided on the attachment (18), lying with the compass axis in a plane which is parallel to one pair of bottom edges (14) and at right angles to the other pair of bottom edges. The hollow body (10) can be moved quickly and accurately into a position in which two parallel bottom edges (14; 16) are aligned in the earth's North-South direction. In this position, the hollow pyramid is able to accrue cosmobiological energy and to supply it to objects situated therein.

EP 0838208
DEVICE FOR TREATING AN ORGANISM WITH ENERGY

Inventor: DENISOV STANISLAV GEORGIEVICH [RU] ; ATAEV DZHAVANSHIR ISMAIL OGLY

Fig. 1

Fig. 2

Fig. 3

Abstract -- Device by energetics affect to bio-object contains wire which is fixed on a substrate as open-ended space spiraling curve, and wire, is representing by not crossing coils, is located in spiral form, and the device is supplied by the element for regulation of intensity by affect, this element executed as closed electro-conductivity contour, which is located with possibility to change its position concerning space spiral-graphic curve. Space spiral-graphic curve can be ellepes -graphic form, and closed contour - form curve, located with a opportunity of turn and linear moving concerning space spiral-graphic curve. The wire can be executed as electro-conducting cover, which is make up dielectric material. The device can be supplied having by bio-

energetics activity chemical elements such as tellurium, lanthanum, gadolinium, bismuth and etc., which are located in a zone of wire arrangement.; The way of valuation at efficiency device's work by energetic affect to bio-object is concluded to measure conductivity of biologic active points by Foll's method at ten main points on each foot and brush before and after affect, to determine for each points its deviation from given significance, which is accepted 50+2 scale points of the device, thus repeated measurements conductivity make after period of time, equal 1, 24 or 48 hours, and the efficiency by affect is evaluate at size of deviations conductivity is received by results its measurement after effect, do not exceeding 40% from size of deviations conductivity, received by results of its measurement before the affect.

EP 0673185

Device for improving the efficiency of engines

Inventor: BERGMANN HERMANN

EC: H05F7/00

The device has a plate (1) provided with a number of pyramids (2), with a pin (4) positioned centrally under the peak of each pyramid, supported by an electrically-conductive collector plate (3). A pair of electrical leads (5,6) extend between the collector plate and the fuel feed for the i.c. engine, or the engine block, or between the collector plate and the electric motor leads, or the electric motor housing. Pref. the individual pyramids are made of Cu sheet and arranged in a matrix with eight pyramids in each direction. Magnets may be inserted in the leads between the collector plate and the i.c. engine or electric motor.

WO 9420702

DEVICE FOR CONVEYING DAMP OR SALTS

Inventor: MOHORN WILHELM

Abstract -- In a device for conveying damp or salts, e.g., to dry masonry, with at least one electrical conductor

wound into a coil (100) and fitted in a housing, the winding diameter of the coil (100) diminishes spirally from one end to the other. Here the distance between the windings of a spiral or wedge-spiral coil (100) and the coil axis in the inward direction is 40 to 60 % smaller on each full revolution than the previous distance. On average, therefore, this gives: for the spiral radius measured at 90 DEG : $R'1 = R1 - R2/4$; at 180 DEG : $R''1 = R1 - R2/2$; at 270 DEG : $R'''1 = R1 - R2 \times 3/4$; at 360 DEG : $R2 = R1/2$.

FR 2554354

Device sensing telluric and cosmic waves and inhibiting their effects

Inventor: DUPIN JACQUES

Abstract -- Device ensuring physiological protection against the harmful effects of telluric and cosmic waves. The invention is constituted by one or several oscillating circuits formed of rings associated with a bar parallel to their plane and extending on either side, the said device being placed horizontally oriented northwards. It is in this way that the device can comprise the rings 1 to 5 centred, side by side, on a single bar 6 or concentric according to 7 to 10 associated with the bar 11, their effect differing in power according to the disposition adopted. The invention can be used to increase physiological comfort and to improve health.

GB 1077765

Device for affecting the growth or properties of organic or mineral bodies

Inventor: ROBERT ANFOSSO

Abstract -- A device said to stimulate plants, or animal or mineral bodies, comprises one or more arcuate or bent member 3 of an electrically conductive material supported on an electrically insulating member 2 of ebonite or a synthetic plastics material. An animal or mineral body being treated may be positioned on an earthed plate. The effect is said to be improved if the member 3 is directed to the East.

[System and method for producing highly amplified radio signals for feedback into the human body](#)

Inventor: CALLAHAN PHILIP

Abstract -- The present invention includes an apparatus and method for generating, duplicating, and transmitting biophotonic radio frequencies that propagate along the atmospheric boundary layer of the human skin and the earth's atmosphere. These biophotonic radio frequencies are applied to a human patient for therapeutic purposes. This function is realized with the use of a series of oscillators (i.e., electronic function generators) designed to produce modulated or unmodulated sine and square wave photons. The oscillators are further adapted to emit the modulated or unmodulated sine and square wave photons from a dielectric or metal antenna built as loops into the walls of a diamagnetic-paramagnetic chamber. When a person is seated in the chamber, the photons of energy from the waves generated along the loop antenna penetrate the human body and provide a variety of therapeutic benefits. Among these therapeutic benefits are relief of rheumatic muscular pain, slowing the metabolism, increasing the efficiency of the immune system, eliminating certain psychosomatic ailments, and suppressing cancer.

Device for the treatment of living beings and plants with pyramid energy

Inventor: OEHME RAINER

Fig. 1

Abstract -- In a device for the treatment of living beings and plants with pyramidal energy, the energy is picked up on energy pick-up lines (12, 13), which are arranged electrically separate along the four edges of the pyramid (6). Since the emission of energy is particularly strong along the pyramid edges, a particularly large amount of energy can be picked up by energy pick-up lines (12, 13) of this type. Such energy pick-up lines (12, 13) are considerably cheaper to produce.

FR 2618076
Device for emitting beneficial wave forms

Inventor: BOURGOUIN DOMINIQUE [FR] ; DACIER CHRISTOPHE

Abstract -- The invention relates to a device allowing the emission of wave forms which are beneficial for all living things. It consists of a set of geometrical shapes whose arrangement generates a symbolic application and gives rise to the appearance of powerful emissions which are beneficial for all living beings. The device according to the invention is in particular intended for creating a beneficial vibrational field.

Abstract -- Pyramidal energy is taken from a pyramid (6) by means of a vibration pick-up applied to it from above. Lines (13, 14) are guided down from this vibration pick-up (10) along an edge of the pyramid (6) and convey the picked-up energy to an upper and lower chakra electrode (8, 9), which are arranged on a support (7).

EP 0229874

Protection device

Inventor: PALM HUBERT DR MED

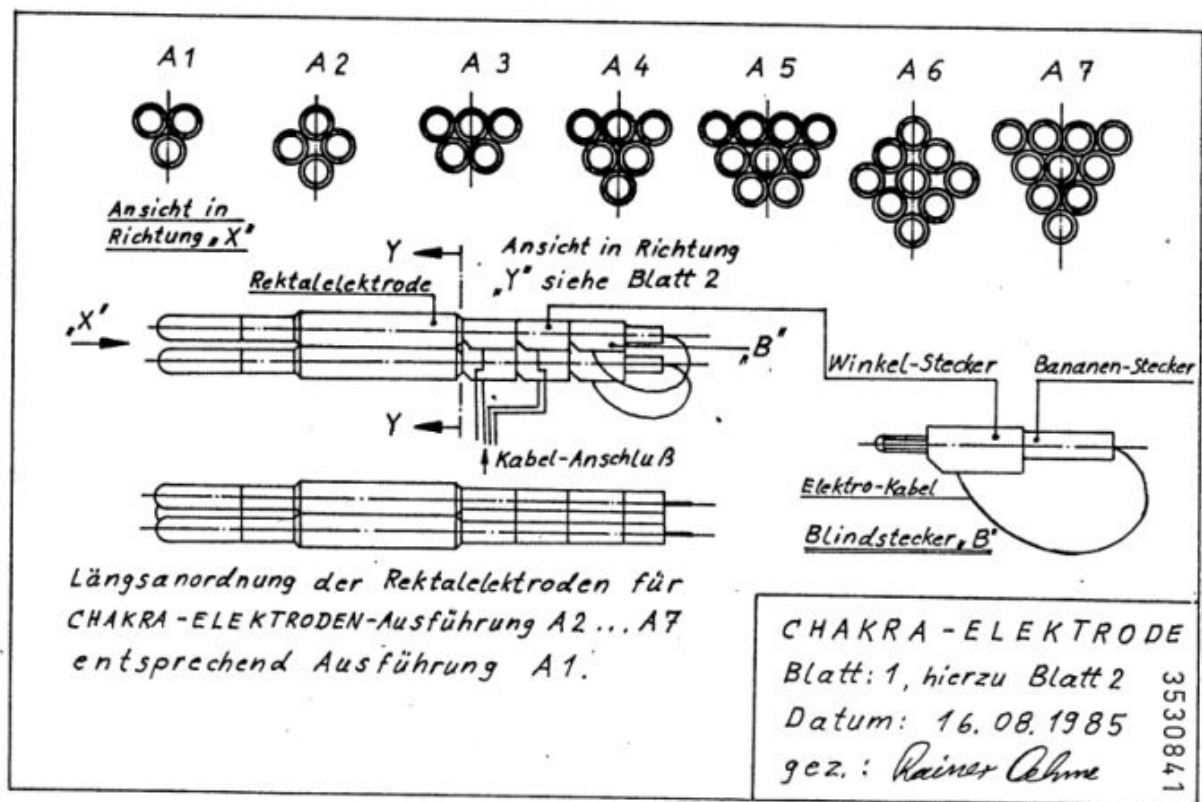

FIG.1

Abstract -- The protective effect and healing action of the device for all life is based on its qualitative biological and structural equivalence to the harmonical system of the cosmos and especially, according to Kepler, of the solar system. Its construction starts from the assumption of all high religions and high cultures that the good part of the cosmos as a whole - as creation of God - and therefore with all its parts is an integral unit of life. Harmonic equipment that bears a qualitative structural resemblance to life and, in particular, is capable of electromagnetic vibrations, must therefore process biologically the same cosmic life forces as it has to transmit inductively, which experience shows occur everywhere in the cosmos, especially in the form of vibrations.

Abstract -- Radiation switch for radiation deflection and irradiation. b) Radiation surface suction probe for radiation deflection and irradiation. The patent specification for which a patent is applied is the combined result of my many years of research into environmentally harmful radiation returning to the sun. In fairly high concentration it is visible as livid-coloured light having a frequency of 40,000 mm. Livid radiation reflectors are produced and assembled by the industry over an uncontrolled, immense area. When used conscientiously and in a controlled manner, the switches and probes listed in the patent specification are suitable for preventing vegetation damage to man, animals, trees and plants. Measurable: with a 50 cm long golden chain on which a golden ring is threaded, shortened to 25 cm. The harmful radiation intensity starts at a pendulum deflection of 1 cm which leads absolutely to death of the

vegetation. Optically: photo/video: falsification of the spectral colours by superposition of the livid light. This livid radiation knows no obstacles. It can only be prevented by application and extension by experts of the law governing radiation protection.

WO 0218007

**METHOD FOR PROTECTING A HUMAN BEING FROM THE ACTION OF A SPIN FIELD
(RADIATION) HAVING LEFT POLARISATION OF SPACE**

Inventor: ORLOV IGOR IVANOVICH [UA] ; BACHISHEV GORCHMA NURY-OGLY

Abstract -- The invention relates to medical equipment which is directed at neutralising damaging effects produced by data display devices, more specifically terminal display devices, TV sets etc, and can be used for video devices, computers and power devices. Said invention can be also used for protecting against the negative effects of geopathogenic zones and geobiological systems. The inventive method is based on an additional field (radiation) having the opposite direction of a spin polarisation within the volume of the field. Said field is produced by the data display device. In addition, a supplementary compensating spin field having a right polarisation of environmental space is created with the aid of a physical vacuum polariser having a right polarisation which is based on the effect of prepolarisation of the polariser's substance. The inventive device comprises a compensating element embodied in the form of at least two coaxial sockets which are arranged on a common base. The internal socket has the lower of the dimensions d of the cross section thereof, which is equal to $d > 0,5 H$, where H represents the height of the socket. Said coaxial sockets have the cross section chosen from a range consisting of a polygon with the side number thereof $m \geq 3$, a circle, a rotary body having an arbitrary shape and the combination of said figures. The walls of the sockets are embodied in such a way that they are sharp-edged on the side of the free ends thereof.

WO 9632192

DEVICE FOR INFLUENCING THE STRUCTURE OF MATERIAL OBJECTS

Inventor: UVAROV VLADIMIR VASILIEVICH
UVAROV VLADIMIR VASILIEVICH [RU]

Fig. 1

Abstract --The technical problem addressed by the invention is that of enhancing an influence on material objects. To enhance a positive influence on material objects, regular rectangular pyramids are proposed, made from a dielectric material and set up in such a way that each of the side facets is aligned with the directions of the horizon, while the geometrical shape of the pyramid is determined by a ratio of the base sides to the pyramid height expressed as follows: $A = 1.572302...H$ or $A = 0.485868...H$, wherein A is the base side of the regular rectangular pyramid and H is the height of the regular rectangular pyramid.

WO 9319579
METHOD AND DEVICE FOR INFLUENCING AN OBJECT AND APPARATUS USING SAID DEVICE

Inventor: KARP YULY SEMENOVICH

Also published as: WO9319579 // EP0646392 // EP0646392 // AU3098692

Abstract -- A method for influencing an object participating in a technological process consists in directing an external energy on an intermediate element which changes its functional state and influences the object participating in the technological process, and the influence is formed as a secondary radiation which is interconnected with the external energy and which is generated from the substance contained in the material of the intermediate element. The formation of the secondary radiation flow with desired parameters is effected by periodical variation of the vector of anisotropy of the substance of the intermediate element and the thus formed flow of the secondary radiation is directed on the object.; The device comprises an external energy source (2) and an intermediate element (3) capable of generating an influence in the form of secondary radiation matching with the external energy from the source (2) and resulting from the periodical change of the vector of anisotropy of the substance contained in the material of the intermediate element (3). The device is used as apparatus for programmed stimulation of self-regulation of biological objects for correction of their functional state.

DE 3320518
Device for changing radiesthetically measurable fields

Inventor: SCHWEITZER PAUL DR

FIG. 7

Abstract -- The invention relates to a device for changing radiesthetically measurable fields with the object of avoiding the pathogenic effects of their biologically active regions, the so-called irritant zones. These fields are mainly caused by underground water veins. However, they are also found in space lattice-like structures, the so-called lattice systems incident from the atmosphere. All the measures and devices known to date for attenuating or eliminating the effect of the irritant zones have shortcomings or disadvantages. As a rule, they are ineffective with regard to the particularly dangerous crossing region of the irritant zones, or they detect only individual frequencies and must be adjusted with the risk of inefficacy due to maladjustment. The invention is based on the object of creating a device for changing radiesthetically measurable fields which avoids the aforesaid disadvantages. This object is achieved using a pyramidal body in that one or more elements, e.g. another pyramidal body, or an element which is resonant in the microwave range, e.g. a spiral, or a homeopathic preparation, is arranged within or directly underneath this body.
